Output power is ERP for Part 22 and EIRP for Part 24. This device contains 900 / 1800 functions that are not operational in U.S. Territories. Collocated transmitter operating configurations have been evaluated as described in filings under this FCC ID; other collocation configurations require separate evaluation. SAR compliance for body-worn operating configurations is limited to the specific configurations tested for this filing: body-worn operations are restricted to belt-clips, holsters or similar accessories that have no metallic component in the assembly and must provide at least 1.5 cm separation between the device and the user's body. End-users must be informed of the body-worn operating requirements for satisfying RF exposure compliance. The highest reported SAR values for single- and co-transmit configurations under this FCC ID are: Part 15 - head 0.14 W/kg; body-worn 0.04 W/kg; Part 22 - head 0.53 W/kg; body-worn 0.81 W/kg; Part 24 - head 0.21 W/kg; body-worn 0.43 W/kg.
