Elliott TCB

Subject: Class II Permissive Change to add the 5.25 – 5.35 GHz band supporting DFS

To the Commission:

The only change made to the transmitters was a code change to support the 5250-5350 band with DFS. The change turned on a DFS support bit in the driver table of the Conexant chipset firmware. The Conexant chipset has had the DFS support built directly into the resident firmware. The enabling of this bit was the only change made to these transmitters. No hardware changes or modifications were made.

The radio card authorized under FCC ID: H9P2121160 (IC ID: 1549D-2121160) has been integrated into the product(s) operating the other FCC and IC ID's listed below. There are no changes or modifications made to the transmitter during these integrations.

H9PMC9090R6 1549D-MC9090R6

We also confirm that the devices listed above do not operate in an "ad-hoc" or "Peer to Peer" mode in the band 5.25-5.35 GHz.

Respectfully,

A handwritten signature in black ink that reads "Marco Belli". The signature is written in a cursive, slightly slanted style.
