Question 1)

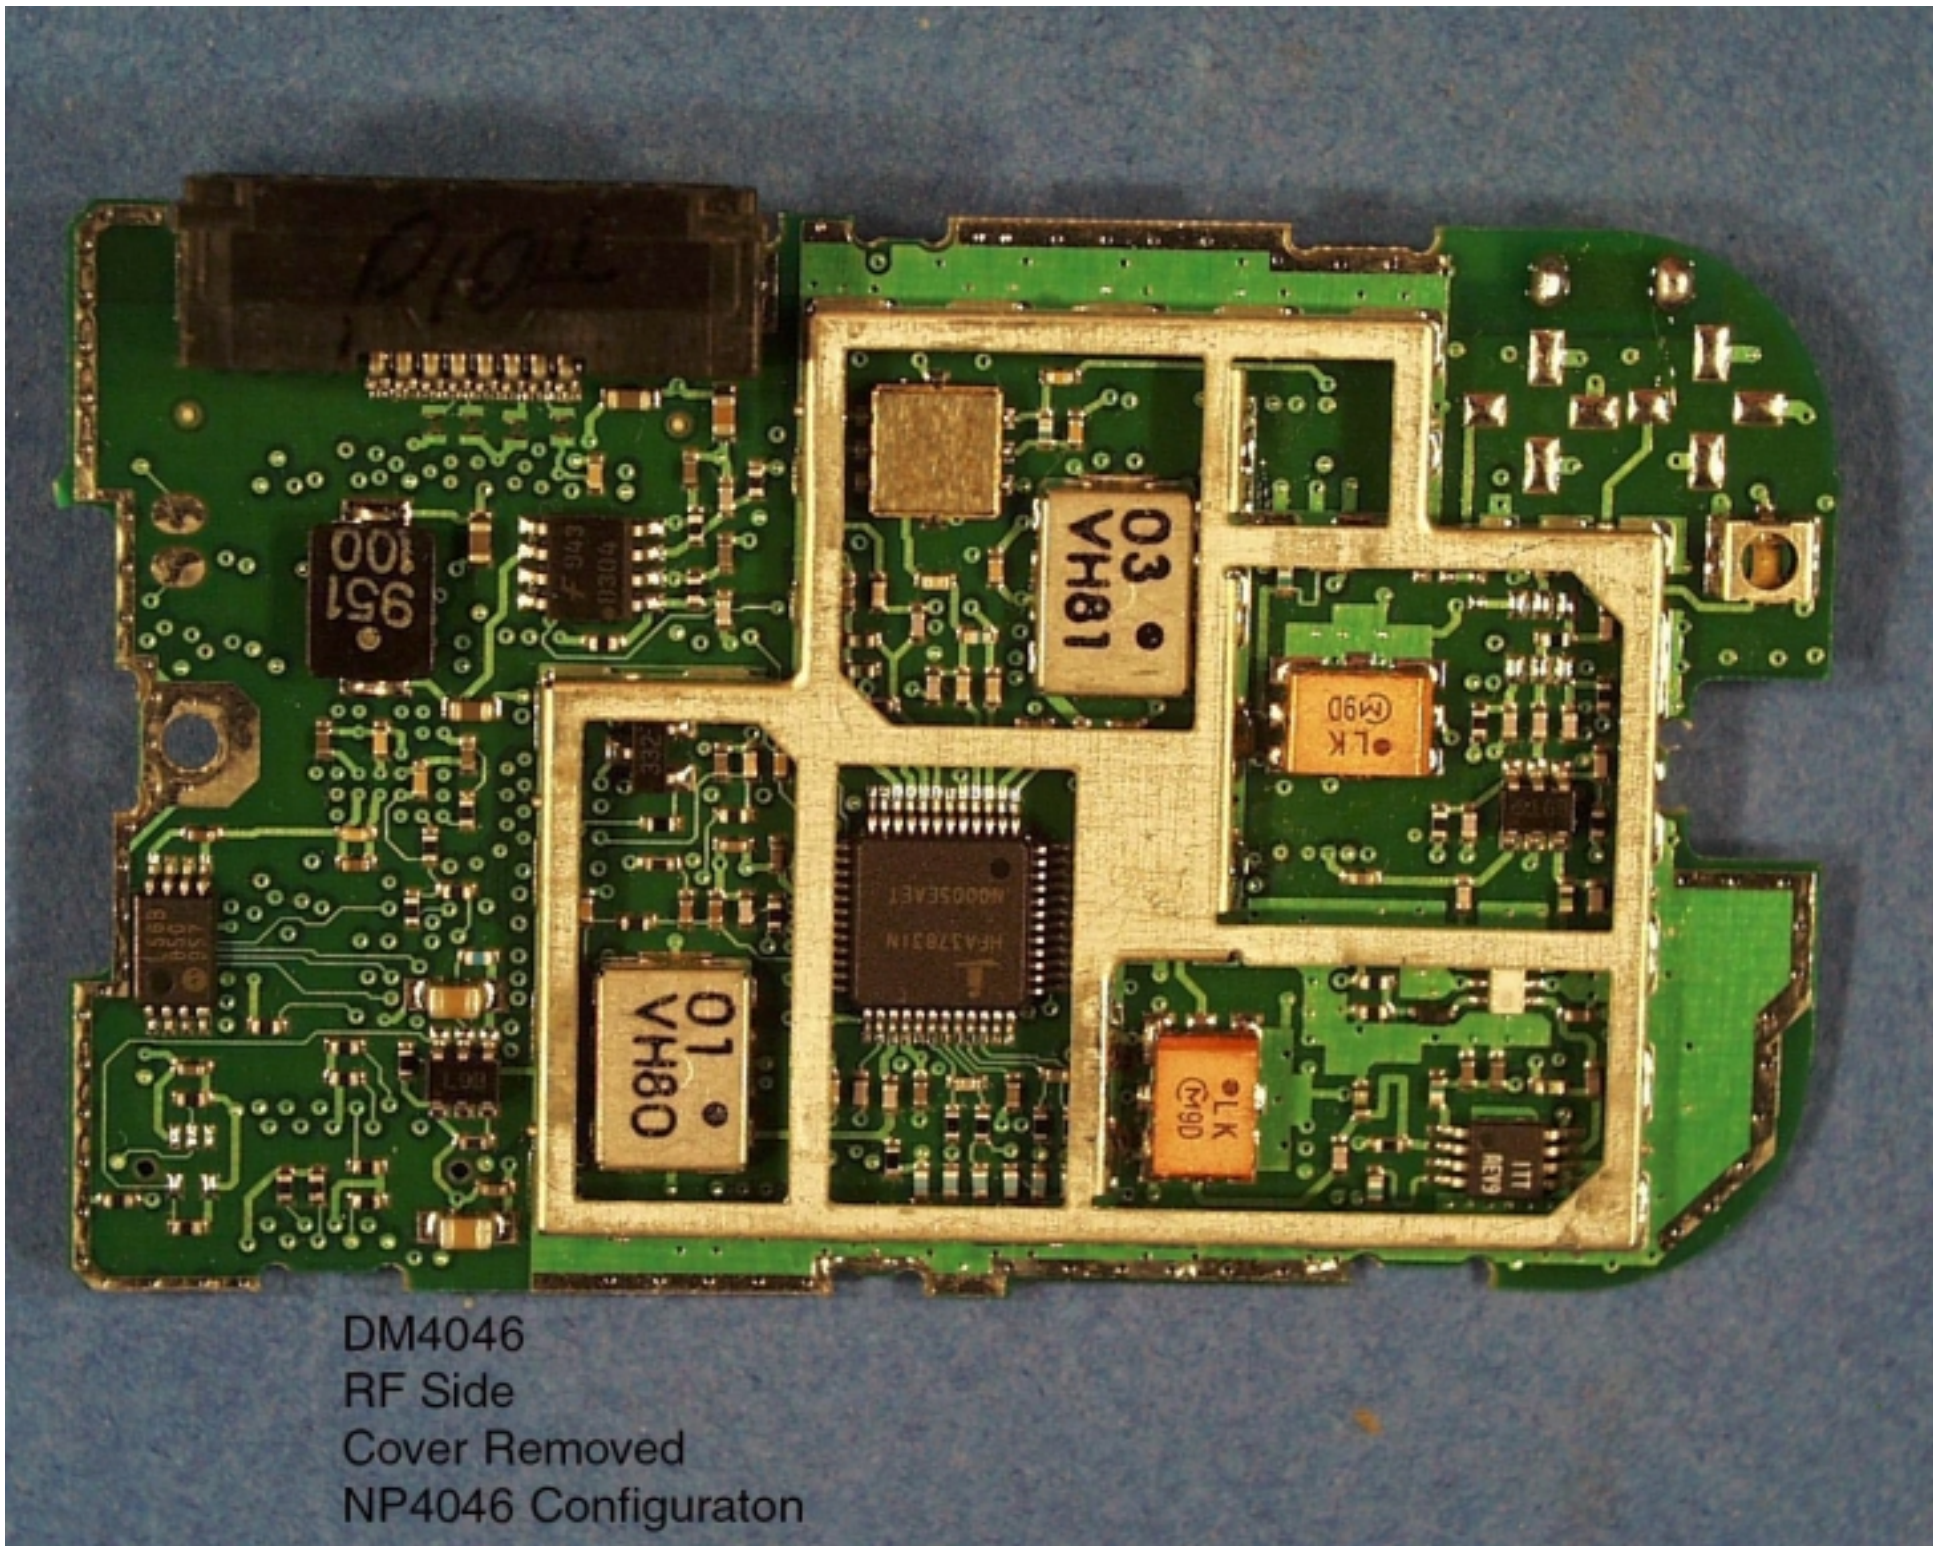

What is the FCC identifier for the LA4021 WLAN card? Confirm that they are the same exact transceiver.

Answer:

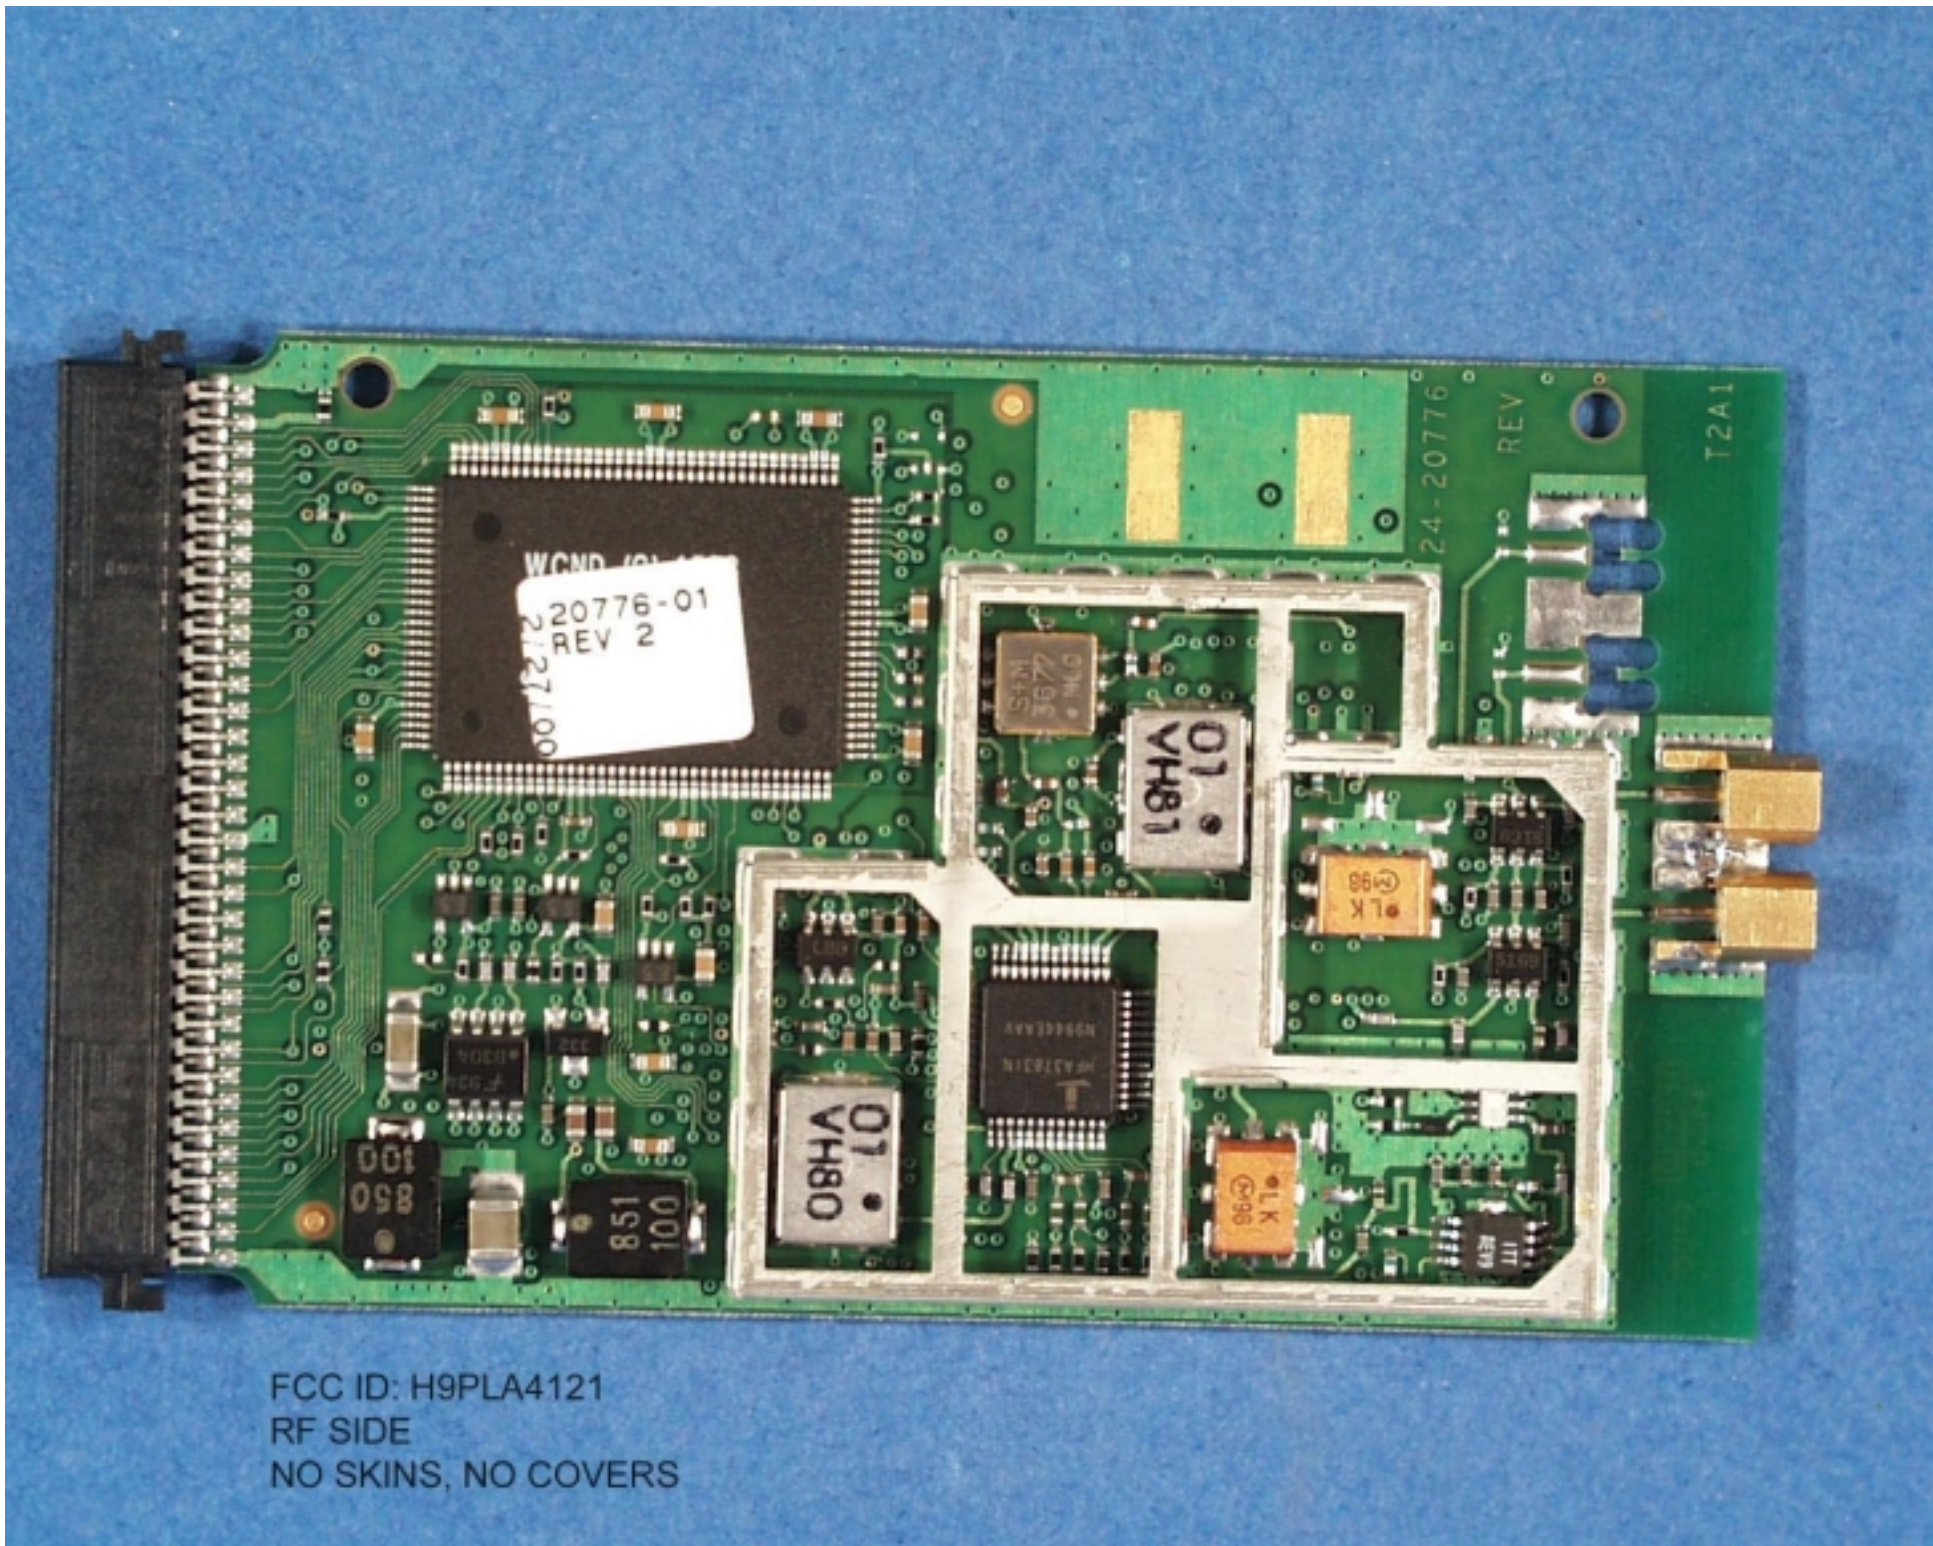

The FCC ID is H9PLA4121. They are the same transceiver.

1. The transmitters are the same.
2. The receivers are the same.

The only difference between the devices are the outline of the PCB and parts of the digital control sections. Although the outline of the PCB is different the layer stackup and thicknesses are the same. I have included a picture of each transceiver so that you may compare them. The transceivers are within the shield frames.
