

15.247(b)(4) The device does not operate in such a manner that causes the public to be exposed to levels in excess of the commissions guidelines. The devices maximum output power at the antenna terminal is 34.7mWatts, as measured by a peak power meter. The patch antenna used in the device has a maximum gain of 0dBi in all directions (See file Antinfo.pdf contained in the operational description exhibit for Spec sheet). The device may operate within 20cm of a user and does not exceed the MPE as outlined in OET Bulletin 65, Supplement C, therefore, SAR evaluation is deemed unnecessary.
