RE:H9PSNAPPER
SAR Declaration

To whom it may concern,

The H9PSNAPPER radio product is not a standalone product. It is not intended to be used by itself. It is intended to be integrated into final products. It is intended for use in Symbol and Symbol partnered products only. The output power is below 1 milliwatt and is below the general required SAR testing threshold power. Any SAR implications will be dealt with by evaluating the need for SAR when it is integrated into the final product.

If you have any questions please contact the undersigned.

Thank You

A handwritten signature in cursive script that reads "Sandy Mazzola".
