This device has 9 antenna configurations approved for remote/external installations and 4 antenna configurations approved for standalone operations, all requiring a separation distance of 20 cm or more from persons during device operation and some configurations also require specific minimum cable lengths to satisfy RF exposure requirements. Seven additional antenna configurations are approved for integration into specific handheld devices, as described in the filing, only for operating in a person's hand(s) and under conditions where a minimum separation distance of 20 cm or more is maintained between the antenna and a person's body to satisfy MPE requirements of 2.1091. RF exposure compliance for the wrist-worn configuration (Model 1040) is limited to wrist-worn operations, as tested previously for an equivalent device (Model 1049). Grantee must ensure the specific operating instructions and RF exposure compliance requirements are provided to end-users of all product configurations for this transmitter to satisfy RF exposure requirements.
