Address of Applicant: 845 Larch Avenue, Elmhurst, IL 60126

Equipment Under Test (EUT)

Product Name: Keypad Access Controller
Model No.: KPW5
FCC ID: HBW190A1808-1

Applicable standards: FCC CFR Title 47 Part 15 Subpart C Section 15.231;
RSS 210; RSS-Gen

Date of sample receipt: Feb. 09, 2015

Date of Test: Feb. 10, to Mar. 09, 2015

Date of report issued: Mar. 10, 2015

Test Result : PASS *

* In the configuration tested, the EUT complied with the standards specified above.

5 General Information

5.1 Client Information

Applicant:	Chamberlain Group Inc, The
Address of Applicant:	845 Larch Avenue, Elmhurst, IL 60126
Manufacturer:	Chamberlain Group Inc, The
Address of Manufacturer:	845 Larch Avenue, Elmhurst, IL 60126

5.2 General Description of E.U.T.

Product Name:	Keypad Access Controller
Model No.:	KPW5
Brand Name:	Liftmaster
Operation Frequency:	310M, 315M, 390M
Modulation type:	OOK
Antenna Type:	Internal antenna
Antenna gain:	0dBi
Power supply:	DC 9V Battery

Note:

1. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

5.3 Test mode

Operating Environment:	
Temperature:	24.0 °C
Humidity:	54 % RH
Atmospheric Pressure:	1010 mbar
Test mode:	
Operation mode	Keep the EUT in continuous transmitting with modulation
The sample was placed 0.8m above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.	

5.4 Description of Support Units

5.5 Laboratory Facility

<p>The test facility is recognized, certified, or accredited by the following organizations:</p> <ul style="list-style-type: none"> ● FCC - Registration No.: 572331 Shenzhen EMC Laboratory: Shenzhen Tongce Testing Lab The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. ● IC - Registration No.: 10668A-1 The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing ● CNAS - Registration No.: CNAS L6165 Shenzhen TCT Testing Technology Co., Ltd. is accredited to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6165.

5.6 Measurement uncertainty

The reported uncertainty of measurement $y \pm U$, where expanded uncertainty U is based on a standard uncertainty multiplied by a coverage factor of $k=2$, providing a level of confidence of approximately 95 %.

No.	Item	Uncertainty
1	Conducted Emission	$\pm 2.56\text{dB}$
2	RF power, conducted	$\pm 0.12\text{dB}$
3	Spurious emissions, conducted	$\pm 0.11\text{dB}$

6 Test results and Measurement Data

6.1 Antenna requirement:

Standard requirement:	FCC Part15 C Section 15.203
15.203 requirement: <i>An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.</i>	
E.U.T Antenna:	
The antenna is an internal antenna which cannot replace by end-user, the best case gain of the antenna is 0 dBi.

Test procedure	<ol style="list-style-type: none"> The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.), which provides a 50ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs). Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4: 2009 on conducted measurement.

<p>Test Procedure:</p>	<ol style="list-style-type: none"> 1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. 2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. 3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. 5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. 6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

6.4 Bandwidth Test

Test Requirement:	FCC Part15 C Section 15.231(c); RSS-210
Test Method:	ANSI C63.4:2009
Receiver setup:	RBW=3 kHz, VBW \geq RBW, Sweep time = Auto.
Limit:	<p>According to 15.231(c),The bandwidth of the emission shall be no wider than 0.25% of the centre frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the centre frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.</p> <p>According to RSS 210 A1.1.3, the 99% bandwidth shall be no wider than 0.25% of the centre frequency for devices operating between 70 MHz and 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the centre frequency.</p>
Test Procedure:	<ol style="list-style-type: none"> 1. According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT. 2. Set the EUT to proper test channel. 3. Max hold the radiated emissions, mark the peak power frequency point and the -20dB or 99% upper and lower frequency points . 4. Read 20dB or 99% bandwidth.
Test setup:	 <p>The diagram illustrates the test setup. On the left is a green Spectrum Analyzer with a blue screen and two red indicator lights. A black cable connects it to a white rectangular component, which is then connected to a yellow rectangular EUT (Equipment Under Test) on the right. The labels 'Spectrum Analyzer' and 'EUT' are placed below their respective components.</p>
Test Instruments:	Refer to section 5.9 for details
Test mode:	Refer to section 5.3 for details
Test results:	Passed

6.5 Manually Activated Transmitter

Test Requirement:	FCC Part15 C Section 15.231(a); RSS-210
Test Method:	ANSI C63.4:2009
Receiver setup:	RBW=1 MHz, VBW ≥ RBW
Limit:	A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released; A transmitter activated automatically shall cease transmission within 5 seconds after activation.
Test Procedure:	<ol style="list-style-type: none"> 1. According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT. 2. Set the EUT to proper test channel. 3. Use the following spectrum analyzer settings: Span = zero span, centered on a channel; RBW = 1 MHz; VBW ≥ RBW; Sweep =5s; Detector function = peak; Trace = max hold. 4. Measure and record the results.
Test setup:	 <p style="text-align: center;">Spectrum Analyzer EUT</p>
Test Instruments:	Refer to section 5.9 for details
Test mode:	Refer to section 5.3 for details
