Request for Class 2 Permissive Change

We, Chamberlain Group, Inc., hereby request a Class 2 Permissive Change.

In support of the Class 2 Permissive Change, the following is stated:

The output power of the device was decreased from +4dBm to 0dBm to improve the transmission quality yields in production, because some IC's get into saturation at +4dBm. The change is strictly in the software, no hardware modification. The modulation parameters are not affected by this change.

I would appreciate your prompt attention to the submittal. If there are any questions, please call me at 630-993-6306 or send a fax to 630-516-6863.

Sincerely,

Barbara P. Kelkhoff
