Subject: Chamberlain/Liftmaster Professional Installation Requirement

To Whom It May Concern,

I have provided below the justification for considering the AC Nitrous Gate series of Residential and Commercial Gate Operators as requiring professional installation, and therefore the use of standard antenna connector is acceptable under FCC regulations.

Background

Our Residential and Commercial Gate Operator line is available with the standard external antenna connector, where the installer fits the supplied antenna, provided in our hardware bag, approved by the FCC for use with these products. The external antenna, through this standard connector, provides us with the greatest range and performance.

Justification

Our Residential and Commercial Gate Operator line is sold exclusively through our controlled dealer network distribution channel. Chamberlain and LiftMaster (tradenname) do not sell these products through any retail chain to the general public, nor does it offer the product for sale by mail order.

Requiring Professional Installation

Chamberlain/LiftMaster states on the cover page of our Installation Manuals that only installation and service is to be done by trained professional installers/technicians. As stated above, the product is available only through our dealer distribution channels. The installation is essential to be completed by a trained professional to ensure the system will operate with the performance that is required.

Application

The Nitrous AC gate operator line of products are intended for residential/commercial/industrial use only, a typical example would installation for a gated community or at a warehouse to allow for delivery vehicles. They are only intended for trained professional installations and adjustments.

Thank you for your attention,

End and Regards,

Barbara P. Kelkhoff
