TEST REPORT

Report No.: 210304050SZN-003

Product: WiFi 5 Gigabit Router

Model No.: 834-5
Brand Name: ADTRAN

FCC ID: HDC17600021F1

Applicant: Adtran

901 Explorer Boulevard, Huntsville, Alabama 35806-2807, United States

Test Method(s)/

FCC Part 15 Subpart C;

Standard(s): FCC KDB 558074 D01 v05r02

ANSI C63.10: 2013

Conclusion: The sample as received complied with the FCC Part 15 Subpart C requirement.

Test By: Intertek Testing Services Shenzhen Ltd. Longhua Branch

101, 201, Building B, No. 308 Wuhe Avenue, Zhangkengjing Community,

GuanHu Subdistrict, LongHua District, Shenzhen, P.R. China.

Sample Receipt Date: 04 March 2021

Test Conducted Date: 03 June 2021 to 07 June 2021

Issue Date: 24 July 2021

TEST REPORT Intertek Report No.: 210304050SZN-003

2.0 General Description

2.1 Product Description

The Equipment Under Test (EUT) is a WiFi 5 Gigabit Router with Bluetooth function(BLE) operating in 2402-2480MHz. The EUT is powered by 12Vdc via adapter Input AC100-240V, 50/60Hz. For more detailed features description, please refer to the user's manual.

Type of Modulation: GFSK

Antenna Type: Integral Antenna

Antenna Gain: 4.0dBi Bluetooth Version: 5.0 BLE

For electronic filing, the brief circuit description is saved with filename: descri.pdf.

2.2 Related Submittal(s) Grants

This is an application for certification of transceiver for the WiFi 5 Gigabit Router which has Bluetooth function(BLE).

Remaining portions are subject to the following procedures:

- 1. Bluetooth EDR function: Subject to FCC Certification and record in the test report: 210304050SZN-002.
- 2. 2.4GHz Wi-Fi function: Subject to FCC Certification and record in the test report: 210304050SZN-004.
- 3. 5G WiFi function: Subject to FCC Certification and record in the test report: 210304050SZN-005.
- 4. Other Digital Function: Subject to FCC Part 15B SDOC.

2.3 Test Methodology

Both AC mains line-conducted and radiated emission measurements were performed according to the procedures in ANSI C63.10 (2013) and KDB 558074 D01 v05r02. Radiated emission measurement was performed in semi-anechoic chamber and conducted emission measurement was performed in shield room. For radiated emission measurement, preliminary scans were performed in the semi-anechoic chamber only to determine the worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the "Justification Section" of this Application.

2.4 Test Facility

The Semi-anechoic chamber and shielded room used to collect the radiated data and conducted data are **Intertek Testing Services Shenzhen Ltd. Longhua Branch** and located at 101, 201, Building B, No. 308 Wuhe Avenue, Zhangkengjing Community, GuanHu Subdistrict, LongHua District, Shenzhen, P.R. China. This test facility and site measurement data have been fully placed on file with File Number: CN1188.

Version: 01-November-2017 Page: 5 of 35 FCC ID 247_b

3.0 System Test Configuration

3.1 Justification

For emissions testing, the equipment under test (EUT) setup to transmit continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, all cables were manipulated to produce worst case emissions. The EUT was powered by AC120V/60Hz input during the test.

Intertek Report No.: 210304050SZN-003

On BLE mode, only one antenna is used, and all data rate were tested and only the worst case data is shown in the report.

For maximizing emissions, the EUT was rotated through 360°, the EUT was placed on the styrene turntable with 0.8m up to 1GHz and 1.5 m above 1GHz. The antenna height and polarization are varied during the search for maximum signal level. The antenna height is varied from 1 to 4 meters. Radiated emissions are taken at three meters unless the signal level is too low for measurement at that distance. If necessary, a pre-amplifier is used and/or the test is conducted at a closer distance.

All readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance. Analyzer resolution is 100 kHz or greater for frequencies below 1000 MHz. The resolution is 1 MHz or greater for frequencies above 1000 MHz. The spurious emissions more than 20 dB below the permissible value are not reported.

The rear of unit shall be flushed with the rear of the table.

Radiated emission measurement were performed the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

3.2 EUT Exercising Software

The EUT exercise program (provided by client) used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use. The worst case configuration is used in all specified testing.

The parameters of test software setting:

During the test, Channel and power controlling software provided by the applicant was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the application and is going to be fixed on the firmware of the end product.

Test Software: WCN Combo Tool V1.0

3.3 Special Accessories

N/A.

Version: 01-November-2017 Page: 6 of 35 FCC ID 247_b

3.4 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered.

3.5 Equipment Modification

Any modifications installed previous to testing by Adtran will be incorporated in each production model sold / leased in the United States.

No modifications were installed by Intertek Testing Services Shenzhen Ltd. Longhua Branch.

3.6 Support Equipment List and Description

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.0 Measurement Results

4.1 Maximum Conducted Output Power at Antenna Terminals, FCC Rules 15.247(b)(3):

The antenna power of the EUT was connected to the input of a broadband peak RF power meter. The power meter have a video bandwidth that is greater than DTS bandwidth and utilize a fast-responding diode detector. Power was read directly at the EUT antenna terminals with cable loss added.

For antennas with gains of 6 dBi or less, maximum allowed Transmitter output is 1 watt (+30 dBm).

| BT BLE (Antenna Gain = 4.0dBi) (GFSK, 1Mbps) | | | | | | | | |
|--|---------------------------------|-----------------|--|--|--|--|--|--|
| Frequency (MHz) | Output in dBm (Peak Reading) | Output in mWatt | | | | | | |
| Low Channel: 2402 | 6.46 | 4.43 | | | | | | |
| Middle Channel: 2440 | 7.22 | 5.27 | | | | | | |
| High Channel: 2480 | 5.86 | 3.85 | | | | | | |

Cable loss: <u>1.0</u> dB External Attenuation: 0 dB

Cable loss, external attenuation has been included in OFFSET function

EUT max. output level = 7.22dBm

EUT max. E.I.R.P = 7.22dBm + 4.0dBi = 11.22dBm = 13.24mW

For RF Exposure, the information is saved with filename: RF exposure.pdf.

Version: 01-November-2017 Page: 8 of 35 FCC ID 247_b

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.2 Minimum 6 dB RF Bandwidth, FCC Rule 15.247(a) (2):

The antenna port of the EUT was connected to the input of a spectrum analyzer. Analyzer RES BW was set to 100 KHz according to FCC KDB 558074 D01 v05r02. For each RF output channel investigated, the spectrum analyzer center frequency was set to the channel carrier. A PEAK output reading was taken, a DISPLAY line was drawn 6 dB lower than PEAK level. The 6dB bandwidth was determined from where the channel output spectrum intersected the display line.

Limit: The 6 dB Bandwidth is at least 500 kHz.

| BT BLE (GFSK, 1Mbps) | | | | | | |
|----------------------|----------------------|--|--|--|--|--|
| Frequency (MHz) | 6 dB Bandwidth (KHz) | | | | | |
| 2402 | 729.4 | | | | | |
| 2440 | 725.0 | | | | | |
| 2480 | 729.4 | | | | | |

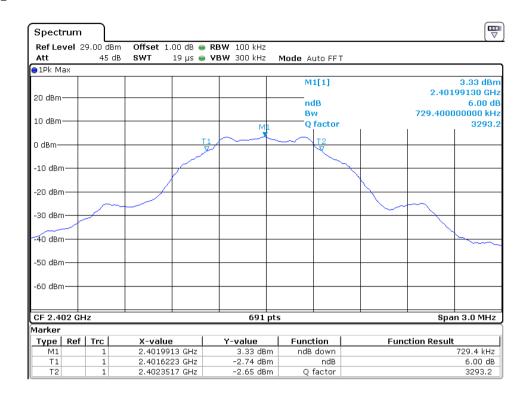

The test plots are attached as below.

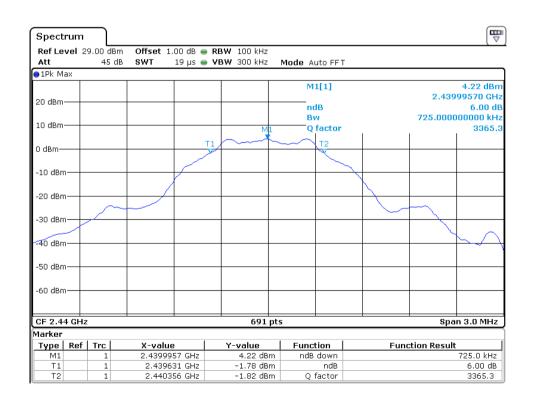

Version: 01-November-2017 Page: 9 of 35 FCC ID 247_b

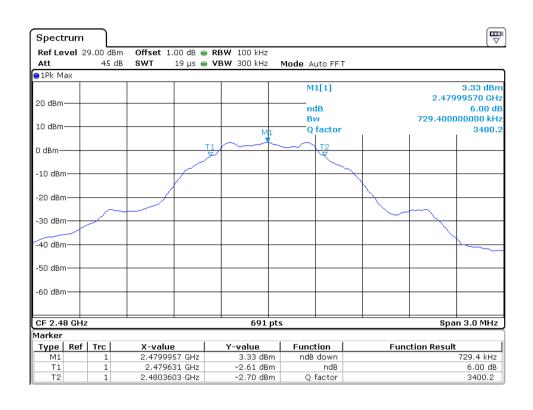

BT BLE

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.3 Maximum Power Density Reading, FCC Rule 15.247(e):

The Measurement Procedure PKPSD was set according to the FCC KDB 558074 D01 v05r02.

Antenna output of the EUT was coupled directly to spectrum analyzer; if an external attenuator and/or cable was used, these losses are compensated for with the analyzer OFFSET function.

Limit: The Power Density does not exceed 8dBm/3 kHz.

| BT BLE (GFSK, 1Mbps) | | | | | | | |
|---|------|--|--|--|--|--|--|
| Frequency (MHz) Power Density with RBW 100KHz | | | | | | | |

BT BLE

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.4 Out of Band Conducted Emissions, FCC Rule 15.247(d)

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. The Measurement Procedure was set according to the FCC KDB 558074 D01 v05r02.

All other types of emissions from the EUT shall meet the general limits for radiated frequencies outside the passband.

Refer to the attached test plots for out of band conducted emissions data with rate of 1Mbps for GFSK.

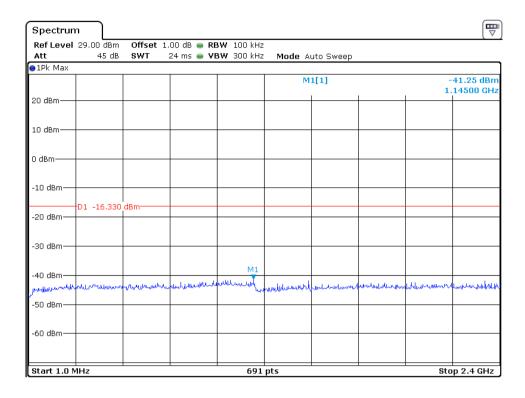

The test plots showed all spurious emission up to the tenth harmonic were measured and they were found to be at least 20 dB below the highest level of the desired power in the passband.

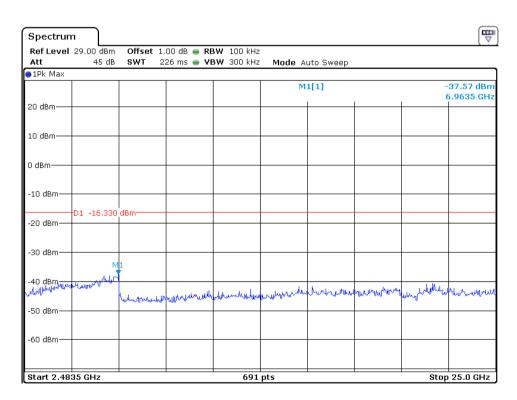

The test plots are attached as below.

Version: 01-November-2017 Page: 15 of 35 FCC ID 247_b

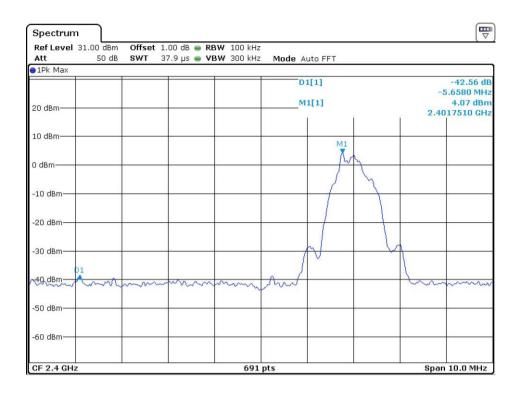

Channel 01 (2402MHz) Reference Level: 3.67dBm

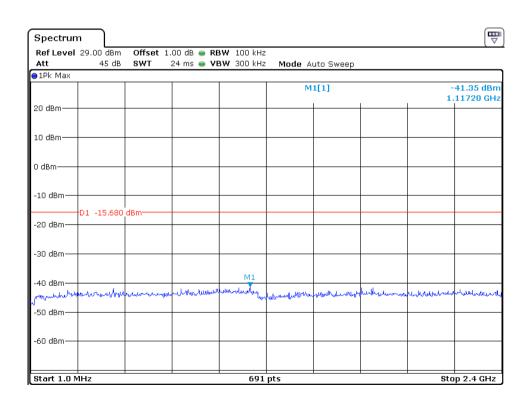

Version: 01-November-2017 Page: 16 of 35 FCC ID 247_b

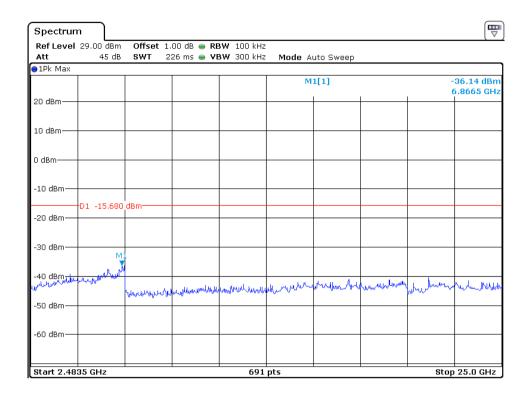

Channel 19 (2440MHz) Reference Level: 4.32dBm

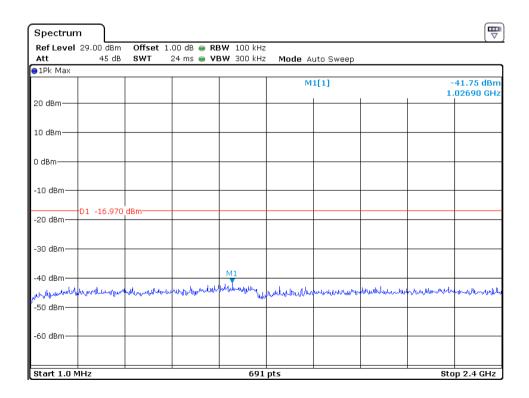

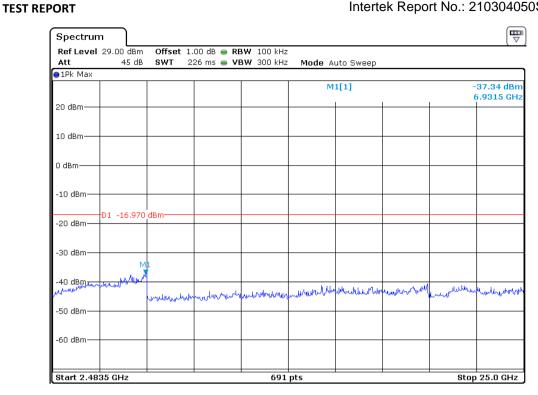

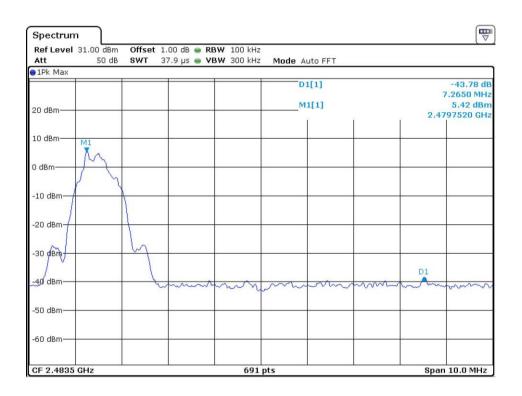

Channel 40 (2480MHz) Reference Level: 3.03dBm

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.5 Out of Band Radiated Emissions (for emissions in 4.4 above that are less than 20dB below carrier), FCC Rule 15.247(d):

Intertek Report No.: 210304050SZN-003

For out of band emissions that are close to or that exceed the 20dB attenuation requirement described in the specification, radiated measurements were performed at a 3m separation distance to determine whether these emissions complied with the general radiated emission requirement.

[×] Not required, since all emissions are more than 20dB below fundamental[] See attached data sheet

Version: 01-November-2017 Page: 20 of 35 FCC ID 247_b

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.6 Transmitter Radiated Emissions in Restricted Bands, FCC Rule 15.35(b) (c):

Data is included of the worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included. All measurements were performed with peak detection unless otherwise specified.

The data on the following pages list the significant emission frequencies, the limit and the margin of compliance.

Version: 01-November-2017 Page: 21 of 35 FCC ID 247_b

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.7 Field Strength Calculation

The field strength is calculated by adding the reading on the Spectrum Analyzer to the factors associated with preamplifiers (if any), antennas, cables, pulse desensitization and average factors (when specified limit is in average and measurements are made with peak detectors). A sample calculation is included below.

Intertek Report No.: 210304050SZN-003

FS = RA + AF + CF - AG + PD

Where FS = Field Strength in $dB\mu V/m$

RA = Receiver Amplitude (including preamplifier) in dBμV

CF = Cable Attenuation Factor in dB

AF = Antenna Factor in dB AG = Amplifier Gain in dB

PD = Pulse Desensitization in dB

In the radiated emission table which follows, the reading shown on the data table may reflect the preamplifier gain. An example of the calculations, where the reading does not reflect the preamplifier gain, follows:

FS = RA + AF + CF - AG + PD

Example

Assume a receiver reading of 62.0 dB μ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted. The pulse desensitization factor of the spectrum analyzer was 0 dB. The net field strength for comparison to the appropriate emission limit is 42 dB μ V/m. This value in dB μ V/m was converted to its corresponding level in μ V/m.

 $RA = 62.0 dB\mu V$

AF = 7.4 dB

CF = 1.6 dB

 $AG = 29.0 \, dB$

PD = 0 dB

 $FS = 62 + 7.4 + 1.6 - 29 + 0 = 42 \, dB\mu V/m$

Level in mV/m = Common Antilogarithm [(42 dB μ V/m)/20] = 125.9 μ V/m

Version: 01-November-2017 Page: 22 of 35 FCC ID 247_b

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

4.8 Radiated Spurious Emission

Worst Case Radiated Spurious Emission at 625.030333MHz is passed by 4.9dB margin.

For the electronic filing, the worst case radiated emission configuration photographs are saved with filename: radiated photos.pdf.

Version: 01-November-2017 Page: 23 of 35 FCC ID 247_b

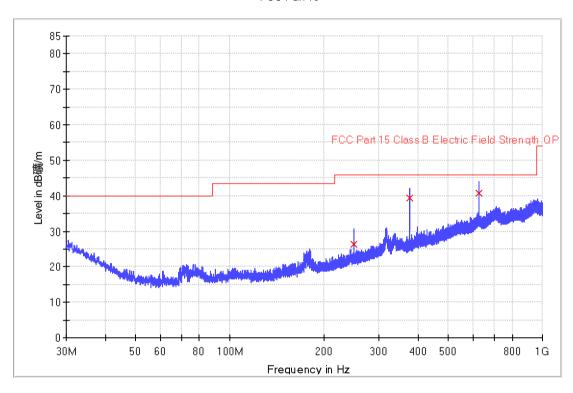

Applicant: Adtran

Date of Test: 03 June 2021 Model: 834-5

Worst Case Operating Mode: Transmitting (2402MHz)

ANT Polarity: Horizontal

FCC Part 15

Radiated Emissions (above 1GHz)

(2402MHz)

| | Polarization | Frequency (MHz) | Reading (dBµV) | Pre- Amp Gain (dB) | Antenna Factor (dB) | Net at 3m (dBμV/m) | Peak Limit at 3m (dBµV/m) | Margin (dB) |
|---|--------------|--------------------|-------------------|-----------------------------|---------------------------|--------------------------|---------------------------------|----------------|
| | Vertical | *4804.000 | 41.9 | 36.8 | 33.5 | 38.6 | 74.0 | -35.4 |
| Ī | Vertical | *2389.500 | 54.0 | 36.4 | 29.1 | 46.7 | 74.0 | -27.3 |

| Polarization | Frequency (MHz) | Reading (dBµV) | Pre- Amp Gain (dB) | Antenna Factor (dB) | Net at 3m (dBµV/m) | Average Limit at 3m (dBµV/m) | Margin (dB) |
|--------------|--------------------|-------------------|-----------------------------|---------------------------|--------------------------|---------------------------------------|----------------|
| Vertical | *4804.000 | 36.7 | 36.8 | 33.5 | 33.4 | 54.0 | -20.6 |
| Vertical | *2389.500 | 42.4 | 36.4 | 29.1 | 35.1 | 54.0 | -18.9 |

NOTES: 1. Peak detector is used, RBW=1MHz/VBW=3MHz for peak value and RBW=1MHz/VBW=10Hz for average value.

- 2. All measurements were made at 3 meters. Radiated emissions not detected at the 3-meter distance were measured at 0.3-meter and an inverse proportional extrapolation was performed to compare the signal level to the 3-meter limit. No other radiated emissions than those reported were detected at a test distance of 0.3-meter.
- 3. Negative value in the margin column shows emission below limit.
- 4. Horn antenna used for the emission over 1000MHz.
- * Emission within the restricted band meets the requirement of section 15.205. The corresponding limit as per 15.209 is based on Quasi peak limit for frequencies below 1000 MHz and average limit for frequencies over 1000 MHz. The radio frequency emissions above 1GHz also meet corresponding 20dB permitted peak limit with a peak detector function.

| Vertical | *7320.000 | 39.1 | 36.6 | 35.8 | 38.3 | 54.0 | -15.7 |

NOTES: 1. Peak detector is used, RBW=1MHz/VBW=3MHz for peak value and RBW=1MHz / VBW=10Hz for average value.

- 2. All measurements were made at 3 meters. Radiated emissions not detected at the 3-meter distance were measured at 0.3-meter and an inverse proportional extrapolation was performed to compare the signal level to the 3-meter limit. No other radiated emissions than those reported were detected at a test distance of 0.3-meter.
- 3. Negative value in the margin column shows emission below limit.
- 4. Horn antenna used for the emission over 1000MHz.
- * Emission within the restricted band meets the requirement of section 15.205. The corresponding limit as per 15.209 is based on Quasi peak limit for frequencies below 1000 MHz and average limit for frequencies over 1000 MHz. The radio frequency emissions above 1GHz also meet corresponding 20dB permitted peak limit with a peak detector function.

4.11 Transmitter Duty Cycle Calculation and Measurements, FCC Rule 15.35(b), (c)

The EUT antenna output port was connected to the input of the spectrum analyzer. The analyzer center frequency was set to EUT RF channel carrier. The SWEP function on the analyzer was set to ZERO SPAN. The Transmitter ON time was determined from the resultant time-amplitude display:

| | See attached spectrum analyzer chart (s) for Transmitter timing |
|---|---|
| | See Transmitter timing diagram provided by manufacturer |
| Х | Not applicable, duty cycle was not used. |

5.0 Equipment Photographs

For electronic filing, the photographs are saved with filename: external photos.pdf & internal photos.pdf.

6.0 Product Labeling

For electronic filing, the FCC ID label artwork and location is saved with filename: label.pdf.

7.0 Technical Specifications

For electronic filing, the block diagram and circuit diagram are saved with filename: block.pdf and circuit.pdf respectively.

8.0 Instruction Manual

For electronic filing, a preliminary copy of the Instruction Manual is saved with filename: manual.pdf.

This manual will be provided to the end-user with each unit sold/leased in the United States.

9.0 Confidentiality Request

For electronic filing, the confidentiality request of the tested EUT is saved with filename: request.pdf.

10.0 Discussion of Pulse Desensitization

The determination of pulse desensitivity was made in accordance with Hewlett Packard Application Note 150-2, *Spectrum Analysis ... Pulsed RF*.

Pulse desensitivity is not applicable for this device since the transmitter transmits the RF signal continuously.
