Importance: High

I just spoke with Mike Violette about this dismissal.

I basically gave them two choices, when we reinstate the grant:

(1) The TCB can modify the user's manual to only show the 2 foot dish the transmitter was tested with as the only approved antenna, or

(2) The TCB can retest the device with a larger antenna (preferably a 10 or 12 foot dish, since the device uses 2, 4, 6, 8, 10 and 12 foot dishes). If they use the 10 foot dish for testing, they must submit a justification for not testing with the antenna with the highest antenna gain (the 12 foot dish). I'm uncomfortable with allowing them to test only a 2 foot dish and approving all those others with only one set of test data. I think they should test with either the 12 foot or 10 foot dish (with justification) and we can approve all those other antennas.
