RE: FCC ID: HDWAEA306  
Attention: Jon Hughes

I have a few comments on this Application.

1. Please provide the tune up procedure for the Part 24 transmitter. -
2. Since a TCB has no way of obtaining the schematics of the rf transmitter, these will have to be provided by the applicant. Please provide the schematics of the rf transmitter used with this device. -
3. Please note that the SAR plots do not show drift. The conducted power of 28.6dBm is on the plots and there is some power variation shown in the conducted power table shown on page 5. I would expect to see some drift during some portions of the testing. Please explain why no power drift information is provided on the plots. -
