RE: Accton Technology Corporation

FCC ID: HED3CRWE554G72

After a review of the submitted information, I have a few comments on the above referenced Application.

1) Please provide an additional photograph underneath the shield/copper tape located on the bottom of the board.
2) The users manual page 123 mentions that the device must utilize shielded interface cables. However, page 101 states the device may uses shielded or unshielded cables. Additionally, the testing configuration given in the test report page 9 does not clearly label the UTP cable as shielded or unshielded. Given the prevalence of unshielded UTP, please confirm if the device was tested with a shielded or unshielded UTP cable. If the device was tested and meets the requirements with an unshielded UTP cable, it would be best to remove the phrase "(for example, use only shielded interface cables when connecting to computer or peripheral devices)" from the manual. However if a shielded cable is required, please have the manufacturer confirm that the unit ships with a shielded cable and remove the reference to unshielded cables on page 79.
3) The calculation on note 1 on page 53 of the test report appears incorrect. 103.7 - 57.53 = 46.17. Please correct.

Timothy R. Johnson
Examining Engineer
