RE: ACCTON TECHNOLOGY CORPORATION

FCC ID: HEDACCWN3302A-1

After a review of the submitted information, I have a few comments on the above referenced Application.

These comments are all made upon the assumption that the EUT's full conducted output power is 18.2 mW and the antenna gain is -1.0 dBi.

- 1) The responsible party located on the DoC information sheet must be located within the U.S. Please provide a corrected copy.
- 2) The RF exposure exhibit states the devices classification is mobile. This should be modified to portable since the device may be used as a general purpose PCMCIA card in a variety of devices including laptops & PDA's, etc. (some of these devices may be used in the lap or while on the body). Therefore touch position is considered applicable and the device must be subject to portable exposure conditions. Please provide a modified RF exposure exhibit.
- 3) Please provide an explanation of how the device has been changed and modified since the first test report provided. Also, please provide an attestation by the manufacturer that the changes will be incorporated into all production models.
- 4) The users manual states that the output power is +15 dBm minimum, +17 dBm typical. Please note that the maximum output power measured was 12.6 dBm. Please correct the users manual.
- 5) Since the EUT was retested, please adjust the test dates in the test report given on page 1 & 4.
- 6) The peak output power given on page 6 does not match the newly measured power. Please adjust the report.

A handwritten signature in black ink, appearing to read "Timothy R. Johnson".

Timothy R. Johnson
Examining Engineer
