To whom it may concern:

Rohde & Schwarz, Inc. hereby requests that a Class 2 Permissive Change be permitted to the Equipment Certification granted under FCC ID: HFLNV7930 to allow for the use of an alternate channel "mask" filter on the output of the various transmitter systems covered by that Certification. This request is being made to allow the use of a filter that's manufactured and supplied by a vendor other than the supplier of the unit tested for the Certification.

It is noted that the design, mechanical construction and performance specifications of the two filters are very similar. Included as part of this Application is a spreadsheet file that tabulates the response data for the filter that was included as part of the original Application for Equipment Certification. Also included is the measurement data, in graphical form, of the proposed alternative filter. Comparison of this data illustrates the electrical similarity of the two filters and consequently their interchangeability. All measurements included were taken by the respective manufacturers of the filter units.

Also included with this filing is a Request for Confidentiality and a copy of the filter specification that was included with the original Certification filing.

Thank you very much for your consideration.

Respectfully submitted,

Richard Sweitzer,  
Program / Project Manager
