To whom it may concern:

Rohde & Schwarz, Inc. hereby requests that a Class 2 Permissive Change be made to the Equipment Certification granted under FCC ID: HFLSV7000FLO to allow for the use of either of two alternate channel "mask" filters on the output of the various transmitter systems covered by that Certification. This request is being made to allow the use of either of these two channel mask filter that are manufactured and supplied by a vendor other than Spinner GmbH, supplier of the filter tested for the Certification application.

The electrical design and performance specifications of each of the proposed alternate filters are similar to the filter used in the original application. It is noted that one of the two proposed filters, the Dielectric model 005A76501, has already been tested with and Certified as part of FCC ID: HFLNV7930. The other proposed filter design, Dielectric U601-CCM-R2E12, is of lower power handling capability and of a different mechanical design.

Included with this Application is the measured response for the Spinner type 616450 filter used for the testing for the HFLSV7600FLO Certification filing, the measured response of the proposed Dielectric 005A76501 filter and the measured response of the proposed Dielectric U601-CCM-R2E12. Comparison of this data illustrates the electrical similarity of the three filters and consequently their interchangeability for this application. All measurements included were taken by the respective manufacturers of the filter units. As an additional reference a copy of the filter specification that was part of the HFLNV7930 Certification filing is also included with this filing.

Thank you very much for your consideration.

Respectfully submitted,

Richard Sweitzer,
