## 4.7 Frequency Stability (Temperature Variation)

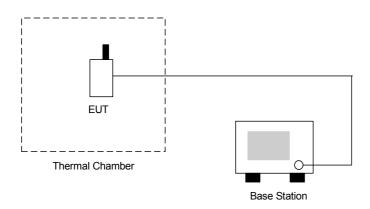

#### 4.7.1 Measurement Instrument

As decribed in chapter 5 of this test report.

#### 4.7.2 Test Procedure

- 1. The EUT and test equipment were set up as shown on the following section.
- 2. With all power removed, the temperature was decreased to -30°C and permitted to stabilize for three hours. Power was applied and the maximum change in frequency was note within one minute.
- 3. With power OFF, the temperature was raised in 10°C steps. The sample was permitted to stabilize at each step for at least one-half hour. Power was applied and the maximum frequency change ws noted within one minute.
- 4. The temperature tests were performed for the worst case.
- 5. Test data was recorded.

## 4.8 Frequency Stability (Voltage Variation)

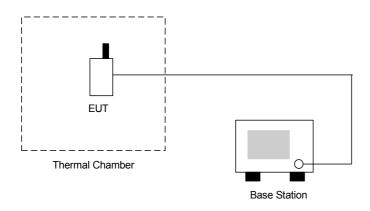

#### 4.8.1 Measurement Instrument

As described in chapter 5 of this test report.

#### 4.8.2 Test Procedure

- 1. The EUT was placed in a temperature chamber at 25±5 °C and connected as the following section.
- 2. The power supply voltage to the EUT was varied from BEP to 115% of the nominal value measured at the input to the EUT.
- 3. The variation in frequency was measured for the worst case.
