**RF Output Power**

Date: 9-18-09

To Whom It May Concern:

Home Automation Inc. (HAI)'s Zigbee radio module 65A10 is designed to have variable output power based on channel. This output power is firmware controlled and is not adjustable by the end-user or integrator. The purpose of this variable output power is to limit the transmission power. The highest channel in use (channel 2480 MHz) will be set at its lowest power setting.
