Georgia Hall
Hyak Labs

Ms. Hall,

The differences between the Kodex MRT-152 radar transceiver and the Kodex MDS-8 transceiver are as follows:

- 1.) The slotted array antenna length has been increased from .9 feet to 1.5 feet.
- 2.) The radar image processing board (logic) and the power supply circuit is installed in the MDS-8 plastic antenna housing.

There have been no modifications or changes to the transceiver or receiver circuits.

Best regards,
Dave Church
