

Date: December 07, 2010

To whom it may concern:

As showed in the internal photo, we put a copper foil on the shielding can, the purpose is to cover the hole on shielding can which is used by gluing jig to glue the baseband IC. It's a standard production process for this product, not a patch for FCC test samples.

Any questions regarding this declaration, please don't hesitate to contact us.

Sincerely Yours,

A handwritten signature in cursive script, appearing to read "Tesla Du", is written above a horizontal line.
