Subject: Non Co-transmit Declaration

FCC ID: HLZZG53GO

We, **Acer**, hereby claims that the embedded GPRS will not either co-transmit with the embedded WLAN or the embedded BT. We implement it by software control. As the GPRS is working and the end users want to turn on WLAN or BT, the system will send a warning message to ask for turning off GPRS first. Before GPRS is turned off, WLAN or BT cannot be turned on. On the contrary, as the WLAN or BT is working and GPRS signal is received, the system will turn off WLAN or BT automatically.

Sincerely,

Easy Lai
