**SUBJECT: Intermec Corporation
FCC ID: HN21555-2450**

Dear Joe:

On behalf of Intermec Technologies is an amendment in response to items 8 and 10 of your e-mail requesting additional information for the subject application.

1. Attached is our revised SAR test report. Please note that the SAR tests were performed at the maximum power levels set by the manufacturer at each frequency (29.83 dBm - 2.4025 GHz, 29.52 dBm - 2.4505 GHz, 30.00 dBm - 2.4805 GHz). The device does not have an RF port, therefore we were not able to measure the actual conducted output power value, and have subsequently listed maximum conducted power as the RF output power level tested in the revised SAR test report.
2. The revised hand SAR test setup photos clearly showing device placement are also attached.

If you have any further questions regarding the above, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Shawn McMillen". The signature is written in a cursive style and is positioned to the left of a vertical line.

Shawn McMillen
