Dear Sirs,

Intermec Technologies Corporation would like to add a new model number to our HN22011B-2 grant that was issued on 27-JAN-2004. This permissive change will add a new hand held computer model number to the current 700C model on this grant.

The 751G model hand held computer was created as a special configuration for a single customer. The 751G model device looks identical to the current 700C unit on the outside, and utilizes the HN22011B-2 radio module as the only wireless communication device. The new model number will allow Intermec to more easily control changes to this configuration.

The HN22011B-2 module and antenna in the 751G model are identical to the current 700C model. There have been no changes since it was certified. All of the exhibits on file with the Commission continue to be representative of the radio.

Any changes to the current 700C host device have been minor updates to the digital electronics. Compliance with Part 15B DoC requirements has been verified by the manufacturer.

Please contact me if you have any questions regarding this attestation.

Sincerely,

Scott Holub
Regulatory Compliance Engineer
