Radio Wave Exposure and Specific Absorption Rate (SAR) Information for Model CN2

The Model CN2 Handheld Computer has been designed to comply with applicable safety requirements for exposure to radio waves. These requirements are based on scientific guidelines that include safety margins designed to assure the safety of all persons, regardless of age and health.

The radio wave exposure guidelines employ a unit of measurement known as the Specific Absorption Rate or SAR. Tests for SAR are conducted using standardized methods with the device transmitting at its highest certified power level.

While there may be differences between the SAR levels of various products, they are all designed to meet the relevant guidelines for exposure to the radio waves.

For residents of Canada and the United States and other countries/regions that have adopted the SAR limit recommended by Industry Canada RSS-102 and Federal Communications Commission Office of Engineering and Technology (OET) Bulletin 65, which is 1.6W/kg averaged over one (1) gram of tissue for uncontrolled general population exposure, the highest SAR value for the Model CN2 Handheld Computer when worn on the body is 0.823 W/kg. The Model CN2 Handheld Computer has been tested and found to meet the FCC RF exposure guidelines when used with the Intermec accessories supplied or designated for this product. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.
