edition number: 01
date of edition: 20/02/2007

- The test report may not be reproduced, unless as a complete packet, without written agreement of Laboratoria De Nayer v.z.w.
- The results refer to the described sample or equipment under test only.
- Neither the accredited status of Laboratoria De Nayer v.z.w., nor this test report implies that the sample or equipment under test is approved by BELAC or any other establishment.
- In case the customer wants to refer to his appeal to our accredited laboratories, he will use the following or equivalent sentence: "Tested by Laboratoria De Nayer, dep. of Electronics, sec. E.M.C., accredited by BELAC for EMC-immunity and EMC-emission under registration number 041-T".

Equipment Classifications

Class A digital device : A digital device that is marketed for use in a commercial , industrial or business environment , exclusive of a device which is marketed for use by the general public or is intended to be used in the home.

Class B digital device : A digital device that is marketed for use in a residential environment , notwithstanding use in commercial , industrial or business environments. Examples of such a devices include , but are not limited to , personal computer , calculators and similar electronic devices that are marketed for use by the general public.

Field Strength Calculation.

The field strength is calculated in the receiver , for conducted emission TDF1 is selected , for spurious radiated emission the champbel and HF906 is selected and for radiated field strength of the fundamental TDF3 is selected. TDF1 is the Transducer Factor for the LISN (combination of the attenuation of the LISN and cable in the range 150kHz-30MHz)

Champbel is the Transducer factor for the bilog antenna (combination of the AF of the Chase antenna , pre-amplifier and cables in the range 30MHz-1GHz) .

HF906 is the Transducer factor for the horn antenna (combination of the AF of the R&S antenna , pre-amplifier and cables in the range 1GHz-5GHz) .

TDF3 is the Transducer factor for the loop antenna (combination of the AF of the loop antenna and cables in the range 150kHz-30MHz) .

Deviations from the test methods :
none

1. Description of the EUT.

1.1. General.

The EUT is composed out one unit

1.2 Technical specifications of the EUT's.

rated power supply	110V/230Vac (50/60Hz)
maximum internal clock freq.	1GHz
Cabling:	1 power cable (L , N , PE) l=2m LAN cable CAT5 : l=25m
Test equipment (AE) (no part EUT)	Laptop : Dell Latitude D600 software + version : Freya

2. Test conditions and climatic conditions.

2.1 Test conditions.

The equipment under test(EUT's) has been tested as a table top equipment.
For the radiated emission test the distance between antenna and EUT was 3 meter.
All tests have been performed in an anechoic chamber.

2.2. Climatic conditions.

test date : 21 and 22/11/2006

The climatic conditions during these tests were: ambient temperature : 21.6/21.8°C
relative humidity: 44/40%
atmospheric pressure:1010/1017 mBar

3. The manufacturers'/applicants' role during the tests.

The applicant prepared the EUT and witnessed the test.

4. Tests.

4.1. Emission tests.

The test has been performed according to the standard: CFR 47 part15 Subpart B .

4.1.1. Conducted emission .

The test has been performed according to the standard: CFR 47 part15 Subpart B section 15.107.

4.1.2 conducted emission on EUT(mains).(22/11/06)

The equipment was placed at ± 80 cm above the floor as table top equipment .

The test has been performed in a shielded room.

The conducted emission level was measured with a LISN according to CISPR16 (0.15 MHz – 30 MHz).

Test voltage : 115VAC /60Hz

The upper limit line is the quasi-peak limit line for class B equipments.

The lower limit line is the average limit line for class B equipments.

Measurement results for EUT

fig2 : plot results L2- PE, peak detector , normal mode.

conclusion :The EUT satisfies the class B limits for conducted emission according to part15 .

4.1.3 radiated emission (30-1000MHz) (22.11.2006).

The equipment was placed as a table top in a semi anechoic room (10x6x6) with metal groundplane on the floor. The chamber complies with the ANSI C63.4/5 and CISPR 16.

The radiated emission level was measured with a bilog antenna (30-1000MHz) .

Test voltage : 115VAC /50Hz

Specification reference :C.F.R.47 part 15.109

The limit line 1 is the quasi-peak limit line(red) for class B equipments.

Re: Accreditation of Laboratoria DE NAYER

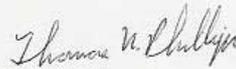

Dear Sir or Madam:

We have been notified by the European Commission that Laboratoria DE NAYER has been accredited as a Conformity Assessment Body (CAB).

At this time your organization is hereby designated to perform compliance testing on equipment subject to Declaration Of Conformity (DOC) and Certification under Parts 15 and 18 of the Commission's Rules.

This designation will expire upon expiration of the accreditation or notification of withdrawal of designation.

Sincerely,

Thomas W. Phillips
Electronics Engineer
