**RE: FCC PART 15 and IC PERMISSIVE CHANGE for RFM,
FCC ID: HSW-2492, IC: 4492A-2492**

Dear Application Examiner:

RFM has added another antenna to the previously approved radio module referenced above. The antenna that is being added is the RF Venue 2.4 GHz CP Beam Antenna, which is the reason for the C2PC request. The referenced radio module was certified under FCC ID: HSW-2492. The client intends to keep this number. The module remains completely identical to the originally certified product which means that it is electrically identical to the original WIT2492 radio module. The details regarding the additional antenna are outlined in the permissive change test report.

Please review all the supporting documentation including the test report for this class 2 permissive change request.

Best Regards,

A handwritten signature in cursive script that reads 'Sandi McEnergy'.

Sandi McEnergy
Agent for RFM.
