

The monopole antennas used for the DM1810-916 modules are 3.1" long, 22 gauge single strand coated wire, tuned to  $\frac{1}{4}$  wavelength at 916.5 MHz. The antennas can be extended perpendicular to the PC board or bent 90 degrees to extend from the top of the PC board parallel to the module. Both antenna configurations have been tested and found to comply to FCC Part 15.247 for use with these modules.
