FEDERAL COMMUNICATIONS COMMISSION  
Equipment Authorization Branch

REF: Talkie Tooter Inc.  
VHF Transmitter, FCC ID: HYD1063

To whom it may concern

I have repackaged the electronics of a current production, low power (350 mW), battery operated, transmitter (HYD1063), that operates in the 72 & 75 MHz range. The repackaging was necessary to allow easier operation of this belt-mounted unit. While the antenna has changed, it essentially is still a top loaded vertical with less than unity gain and like the original unit is built into the metal case. The circuit board and all electronic components are identical in both units.

Sincerely

PETE RUESE  
Production Engineer
