DENSO

- 3. Outline of the system
- 3.1. Description of the system operation

This system is mainly used for locking or unlocking the doors of the vehicle.

The transmitter send a radio wave signal while the button is pushed.

The receiver becomes active in response to the signal from the transmitter.

3.2. Installation in vehicle

DENSO

2. Technical description of the system

2.1. Type number

- Transmitter : 12BAR

2.2. Specifications of receiver

- Nominal frequency

- Local oscillator frequency

- Antenna

- Power Supply

- Nominal supply voltage

- Type of Battery

- Radio frequency output power - Type of modulation

: A1D

655kHz CR oscillator circuit

: 314.35 MHz

: 75.6dB μ V/m or less

: 314.35 MHz SAW resonator circuit

: 3 VDC : One lithium battery

: Built-in type (Fixed)
