RADIO TEST REPORT

Test Report No. : 13664341H-A

| Applicant | : | DENSO CORPORATION |
|---------------------|---|---|
| Type of EUT | : | Blind Spot Monitor Sensor |
| Model Number of EUT | : | DNSRR004 |
| FCC ID | : | HYQDNSRR004 |
| Test regulation | : | FCC Part 15 Subpart C: 2021 *For Permissive Change |
| Test Result | : | Complied (Refer to SECTION 3.2) |

1. This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.

- 2. The results in this report apply only to the sample tested.
- 3. This sample tested is in compliance with the limits of the above regulation.
- 4. The test results in this test report are traceable to the national or international standards.

- 5. This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- 6. This test report covers Radio technical requirements. It does not cover administrative issues such as Manual or non-Radio test related Requirements. (if applicable)
- 7. The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- 8. The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan has been accredited.
- 9. The information provided from the customer for this report is identified in Section 1.

Date of test:

Approved by:

Representative test engineer:

January 8 to 13, 2021 Yuichiro Yamazaki

Engineer Consumer Technology Division

mga

Tsubasa Takayama Leader Consumer Technology Division

The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan. There is no testing item of "Non-accreditation".

SECTION 2: Equipment under test (EUT)

2.1 Identification of EUT

| Туре | : Blind Spot Monitor Sensor |
|----------------------------|---|
| Model Number | : DNSRR004 |
| Serial Number | : Refer to SECTION 4.2 |
| Rating | : DC 12 V (Car battery) |
| Receipt Date | : January 7, 2021 |
| Country of Mass-production | : Japan |
| Condition | : Production prototype |
| | (Not for Sale: This sample is equivalent to mass-produced items.) |
| Modification | : No Modification by the test lab. |
| | |

2.2 Product Description

Model: DNSRR004 (referred to as the EUT in this report) is a Blind Spot Monitor Sensor.

This sensor (DNSRR004) is the 24.05 GHz - 24.25GHz vehicle-mounted field disturbance sensor that is a microwave frequency modulated continuous wave (FM-CW) and two frequency continuous wave (Two frequency-CW) sensor operating at 24.05 GHz to 24.25 GHz (FM-CW) and 24.15 GHz to 24.25GHz (Two frequency-CW). Nominal frequency is 24.15GHz.

DNSRR004 is using an electric scanning called Digital Beam Forming (DBF) to determine azimuth angle of objects. This equipment is an obstacle detector of the diagonally backward vehicle.

General Specificaion

| Clock frequency(ies) in the system | : | Microcomputer: 240 MHz |
|------------------------------------|---|--|
| Radio Specification | | |
| Radio Type | : | Transceiver |
| Frequency of Operation | : | 24.15 GHz |
| Frequency range | : | 24.05 GHz to 24.25 GHz (FM-CW) |
| | | 24.15 GHz to 24.25 GHz (Two frequency-CW) |
| Modulation | : | QXN (FM-CW, Two frequency-CW) |
| Antenna type | : | Microstrip Antenna (Built-in type) |
| Antenna connector | : | None (Internal Antenna) |
| Antenna Gain | : | 9.3 dBi (Broad beam), 12.5 dBi (Narrow beam) |
| Steerable Antenna | : | Electronically |
| Usage location | : | Vehicle-mounted |

SECTION 3: Test specification, methods & procedures

3.1 Test specification

| Test Specification | : FCC Part 15 Subpa | rt C |
|--------------------|---------------------|--|
| - | FCC Part 15 final r | evised on January 12, 2021 and effective February 11, 2021 |
| Title | : FCC 47CFR Part15 | Radio Frequency Device Subpart C Intentional Radiators |
| | Section 15.207 | Conducted limits |
| | Section 15.249 | Operation within the bands 902-928 MHz, |
| | | 2400-2483.5 MHz, 5725-5875 MHz and 24.0-24.25 GHz |
| | | |

* The revision does not affect the test result conducted before its effective date.

3.2 **Procedures and results**

| No. | Item | Test Procedure | Specification | Deviation | Worst margin | Results |
|-----|--|---|-------------------------|-----------|--|-----------------|
| 1 | Conducted Emission | ANSI C63.10-2013 6. Standard test methods | Section 15.207(a) | N/A | N/A | N/A *1) |
| 2 | Electric Field Strength of Fundamental Emission | ANSI C63.10-2013 6. Standard test methods | Section 15.249(a)(c)(e) | N/A | 9.4 dB (24150.000 MHz, Vertical, PK with Duty Factor) < Narrow beam (Right) > | Complied a) |
| 3 | Electric Field Strength of Spurious Emission | ANSI C63.10-2013 6. Standard test methods 9. Procedures for testing millimeter-wave systems | | N/A | 5.4 dB (24250.00 MHz, Vertical Peak with Duty factor) < Broad beam > | Complied# a) |
| 4 | 20dB Bandwidth | ANSI C63.10-2013 6. Standard test methods | FCC 15.215 | N/A | N/A | Complied b) |
| 5 | Frequency Tolerance | ANSI C63.10-2013 6. Standard test methods | Section 15.249(b) | N/A | N/A | N/A *2) |

Note: UL Japan, Inc.'s EMI Work Procedures No. 13-EM-W0420 and 13-EM-W0422.

*1) The test is not applicable since the EUT is not the device that is designed to be connected to the public utility (AC) power line. *2) The test is not required since this EUT does not point-to-point operation with 24.05 GHz to 24.25 GHz.

a) Refer to APPENDIX 1 (data of Radiated Emission (Electric Field Strength of Fundamental and Spurious Emission)) b) Refer to APPENDIX 1 (data of 20dB Bandwidth, 99% Occupied Bandwidth)

Symbols:

CompliedThe data of this test item has enough margin, more than the measurement uncertainty.Complied#The data of this test item meets the limits unless the measurement uncertainty is taken into consideration.

FCC Part 15.31 (e)

The EUT provides stable voltage constantly to the RF part regardless of input voltage. Instead of a new battery, DC power supply was used for the test.

That does not affect to the test result, therefore the EUT complies with the requirement.

FCC Part 15.203 Antenna requirement

It is impossible for end users to replace the antenna, because the antenna is mounted inside of the EUT. Therefore, the equipment complies with the antenna requirement of Section 15.203.

3.3 Addition, deviation, exclusion to standards

Other than above, no addition, exclusion nor deviation has been made from the standard.

3.4 Uncertainty

EMI

There is no applicable rule of uncertainty in this applied standard. Therefore, the results are derived depending on whether or not laboratory uncertainty is applied.

The following uncertainties have been calculated to provide a confidence level of 95 % using a coverage factor k = 2.

Ise EMC Lab.

SECTION 5: Radiated emission (Electric Field Strength of Fundamental and Spurious Emission)

Test Procedure and conditions

[For below 30 MHz]

EUT was placed on a urethane platform of nominal size, 0.5 m by 1.0 m, raised 0.8 m above the conducting ground plane.

The EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for vertical polarization (antenna angle: 0 deg., 45 deg., 90 deg., 135 deg and 180 deg.) and horizontal polarization.

*Refer to Figure 1 about Direction of the Loop Antenna.

[For below 1 GHz]

EUT was placed on a urethane platform of nominal size, 0.5 m by 1.0 m, raised 0.8 m above the conducting ground plane. The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with a ground plane.

[For above 1 GHz, up to 40 GHz]

EUT was placed on a urethane platform of nominal size, 0.5 m by 0.5 m, raised 1.5 m above the conducting ground plane.

The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with absorbent materials lined on a ground plane.

The height of the measuring antenna varied between 1 m and 4 m (frequency range 9 kHz - 30 MHz: loop antenna was fixed height at 1.0 m) and EUT was rotated a full revolution in order to obtain the maximum value of the electric field strength.

Test antenna was aimed at the EUT for receiving the maximum signal and always kept within the illumination area of the 3 dB beamwidth of the antenna.

The measurements were performed for both vertical and horizontal antenna polarization with the Test Receiver, or the Spectrum Analyzer.

30 MHz to 200 MHz

200 MHz to 1 GHz

Above 1 GHz

The measurements were made with the following detector function of the test receiver and the Spectrum analyzer (in linear voltage average mode).

The test was made with the detector (RBW/VBW) in the following table.

Below 30 MHz

When using Spectrum analyzer, the test was made with adjusting span to zero by using peak hold.

| Antenna Type | Loop | Biconical | Logper | iodic | Horn |
|-----------------|-----------------|-----------------|---------------|----------------|------------------|
| | | | | | |
| Frequency | 9 kHz - | 150 kHz - | 30 MHz - | 1 GHz - 40 GH | Z |
| | 150 kHz | 30 MHz | 1 GHz | | |
| Instrument used | Test Receiver | Test Receiver | Test Receiver | Spectrum Analy | /zer |
| Detector | QP, Average *1) | QP, Average *1) | QP | Peak | Average *2) |
| IF Bandwidth | BW 200 Hz | BW 9 kHz | BW 120 kHz | RBW: 1 MHz | Pulsed emission |
| | | | | VBW: 3 MHz | - RBW: 1 MHz |
| | | | | | - Peak with duty |
| | | | | | |
| | | | | | Other than above |
| | | | | | - RBW: 1 MHz |
| | | | | | - VBW: 10 Hz |

Test Antennas are used as below;

Frequency

*1) Although these tests were performed other than open field test site, adequate comparison measurements were confirmed against 30 m open field test site. Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 414788.

*2) For Pulsed emission (Fundamental and band-edge): The Average value was calculated by reducing Duty factor from Peak (Peak value – Duty factor). For Duty factor, please refer to page Duty factor measurement. Other than pulsed emission, aVBW was set to 10 Hz and linear voltage average mode was used.

[Test setup] Below 1 GHz

 $\pmb{\times}$: Center of turn table

r : Radius of an outer periphery of EUT

×: Center of turn table 10 GHz - 26.5 GHz

Test Distance: 3 m

Distance Factor: $20 \times \log (3.75 \text{ m}^*/3.0 \text{ m}) = 1.9 \text{ dB}$ * Test Distance: (3 + SVSWR Volume /2) - r = 3.75 m

SVSWR Volume: 1.5 m (SVSWR Volume has been calibrated based on CISPR 16-1-4.) r = 0 m

* The test was performed with r = 0.0 m since EUT is small and it was the rather conservative condition.

Distance Factor: 20 x log $(1.0 \text{ m}^* / 3.0 \text{ m}) = -9.5 \text{ dB}$ *Test Distance: 1.0 m

× : Center of turn table

× : Center of turn table

Distance Factor: $20 \times \log (0.5 \text{ m}^* / 3.0 \text{ m}) = -15.6 \text{ dB}$ *Test Distance: 0.5 m

|--|----|---|

[About fundamental measurement]

The carrier levels were confirmed at maximum direction of transmission. The maximum direction was searched under carefully since beam-widths are narrow.

The carrier levels were measured in the far field. The distance of the far field was calculated from follow equation.

$$r = \frac{2D^2}{\lambda}$$

where

r is the distance from the radiating element of the EUT to the edge of the far field, in m D is the largest dimension of both the radiating element and the test antenna (horn), in m (The antenna aperture size of test antenna was used for this caluculation.)

Lambda is the wavelength of the emission under investigation [300 / f (MHz) * 10³], in millimeter

| Frequency | Wavelength | Maximum Dimention | | | Far Field |
|-----------|------------|----------------------|----------|---------|-----------|
| | | EUT Test Antenna Max | | Maximum | Boundary |
| | Lambda | | (MHA-02) | D | r |
| [GHz] | [mm] | [m] | [m] | [m] | [m] |
| 24.250 | 12.4 | 0.028 | 0.039 | 0.039 | 0.246 |

[Above 40 GHz]

The test was performed based on "Procedures for testing millimeter-wave systems" of ANSI C63.10-2013. The EUT was placed on an urethane platform, raised 1.5 m above the conducting ground plane. The measurements were performed on handheld method.

Set spectrum analyzer RBW, VBW, span, etc., to the proper values. Note these values. Enable two traces—one set to "clear write," and the other set to "max hold." Begin hand-held measurements with the test antenna (horn) at a distance of 1 m from the EUT in a horizontally polarized position. Slowly adjust its position, entirely covering the plane 1 m from the EUT. Observation of the two active traces on the spectrum analyzer will allow refined horn positioning at the point(s) of maximum field intensity. Repeat with the horn in a vertically polarized position. If the emission cannot be detected at 1 m, reduce the RBW to increase system sensitivity. Note the value. If the emission still cannot be detected, move the horn closer to the EUT, noting the distance at which a measurement is made.

Note the maximum level indicated on the spectrum analyzer. Adjust this level, if necessary, by the antenna gain, conversion loss of the external mixer and gain of LNA used, at the frequency under investigation. Calculate the field strength of the emission at the measurement distance from the Friis' transmission equation.

| Frequency | 40 GHz - 100 GHz |
|----------------------------|------------------|
| Final measurement distance | 0.5 m |
| with 1 MHz Peak detector | |

| Detector | Peak | Average *1) | |
|--------------|------------|-----------------------------------|--|
| IF Bandwidth | RBW: 1 MHz | Pulsed emission Other than pulsed | |
| | VBW: 3 MHz | - RBW: 1 MHz - RBW: 1 MHz | |
| | | - Peak with duty - VBW: 10 Hz | |

*1) For Pulsed emission: The Average value was calculated by reducing Duty factor from Peak (Peak value – Duty factor). For Duty factor, please refer to page Duty factor measurement. Other than pulsed emission, a VBW was set to 10 Hz and linear voltage average mode was used.

[Test setup] 40 GHz - 100 GHz

Distance Factor: 20 x log $(0.5 \text{ m}^* / 3.0 \text{ m}) = -15.6 \text{ dB}$ *Test Distance: 0.5 m

- The carrier level and noise levels were confirmed at each position of X and Y axes of EUT to see the position of maximum noise, and the test was made at the position that has the maximum noise.

The test results and limit are rounded off to one decimal place, so some differences might be observed.

SECTION 6: 20 dB Bandwidth, 99 % Occupied Bandwidth and Duty Cycle

Test Procedure

The measurement was performed in the antenna height to gain the maximum of Electric field strength.

| Test | Span | RBW | VBW | Sweep | Detector | Trace | Instrument used |
|-----------------|---|--------------------------------|---------------------------------|----------|-------------|-----------------|-------------------|
| 20 dB Bandwidth | 600 MHz | 2 MHz 1 % to 5 % of OBW | 6 MHz Three times of RBW | 60 sec | Peak | Max Hold | Spectrum Analyzer |
| | 600 MHz, Enough width to display emission skirts | 2 MHz, 1 % to 5 % of OBW | 6 MHz, Three times of RBW | 60 sec | Peak *1) | Max Hold *2) | Spectrum Analyzer |
| Duty Cycle | - | - | - | 200 msec | - | Single | Oscilloscope |

*2) The measurement was performed with Max Hold since the duty cycle was not 100 %.

*Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

Test item:

RE: Radiated emission, 20 dB bandwidth and Duty cycle tests
