

Product Description

The HZB-AP700 device is a 802.11abg tri-mode access point product. The device supports 802.11b/g and 802.11a protocol simultaneously. It operates at 2.4GHz and 5GHz band, with dual-band transmission capability. The product is offered with integrated antennas, or external antennas of various types. Testing on each types of antenna that may potentially be used have been done to be compliant. Instructions on system configuration and antenna installation with a list permissible antennas are detailed in the User's Manual under the regulatory section. External antennas must be professionally installed. For more detailed information, please reference the submitted user's manual of the product.
