Re: HZB-AP700 application

To Whom It May Concern:

With this letter, we apply for approval of the HZB-AP700 product for its operation in 2.4G and 5GHz bands.

The HZB-AP700 product is a 802.11abg product that has previously been approved under IXMAPAGAT01 for 2.4GHz, 5.15-5.35GHz and 5.725-5.850 GHz operation. We also additionally tested the product to 5.47-5.725 GHz band to 15.407, and added DFS feature to 5.25-5.35 GHz band as well as 5.47-5.725 GHz band.

With the previous certification submission documents in the IXMAPAGAT01, per approval of USI (see separately submitted letter of permission from USI) and additional 5.47-5.725 GHz radio test report and DFS test report, we apply to certify the radio under HZB-AP700 for all the above mentioned bands.

Please review the submitted application documents. Please be notified that there is no hardware change to the existing radio from the prior certified IXMAPAGAT01 radio.

Please direct any questions you may have to the undersigned.

Yours truly,

A handwritten signature in black ink, appearing to read "Caroline Yu".
