Gentlemen,

Please note my response to your comment below. EUT was retested to 15.209 limits. The cabling to the EUT was placed such that it maximized any emissions from the equipment. Results reported in the report have been updated to reflect.

Question

EMC test report (page 98 of 107) shows 1) A graph depicting over the limit radiated spurious emissions between 30-88 MHz for a vertical polarized antenna test set up. Please explain in detail and submit necessary data to justify this as in compliance. 2) The wrong limits in the table of results and therefore in the plot (as compared with limits listed in CFR 47 Part 15.209 (a)). Please explain and/or correct and verify for compliance.

Sincerely,

Signature
