RE: Grant Frequency Range

To Whom It May Concern:

Please note that the Form 731 associated with this filing lists the frequency ranges and output powers as listed on the original grant, which combined the entries for the 5150 - 5250 MHz and 5250 - 5350 MHz bands into a single range. To make future changes to this grant for the purposes of adding antennas for outdoor use only it might be best to split the grant's frequency ranges to reflect the 5150 - 5250 and 5250 - 5350 MHz U-NII separately. If you would like this done at this time, please advise and we can review the original test report so that the powers can be correctly listed for 5180-5240 MHz; 5190 - 5230 MHz; 5260 - 5320 MHz and 5270 - 5310 MHz.

The original grant holder is not interested or willing to file for changes in the original grant to reflect the frequency ranges separately, otherwise we would have asked for the original grants to be changed prior to making this request for a Change in ID. Alternatively we can request for the change in frequency ranges through a future C2PC, either when filing for a C2PC to add antennas or as a separate filing.

Sincerely,

A handwritten signature in blue ink that reads 'David Guidotti'.
