Caroline:

These two files in the application contain information which conflicts with information elsewhere:

1) the measured output is 66 mW or 18 dBm; the antenna installation manual give the formula 17 dBm or 36 - G. Can you correct the value to 18 dBm to agree with the formula given elsewhere? Original copy attached.

(2) The RF exposure statement refers to point-to-point operation. Can you correct to point-to-multipoint? Original copy is attached.

Thank you,
Roland Gubisch
