Attention: Reviewing Engineer

The HZB-U58-B60 radio is designed for fixed-mount point-to-multipoint applications. The device is integrated to an array antenna with maximum gain of 19dBi.

The maximum EIRP for the HZB-U58-B60 as defined in FCC 15.407 is +36 dBm. For the worst case EIRP of +36dBm, the power density at 1.5 meters from an antenna is:

$$S = \text{EIRP}/4\pi R^2 = 0.142 \text{ W/m}^2 = 0.014 \text{ mW/cm}^2 < 1 \text{ mW/cm}^2$$

Where: S = Power density

R = distance to the center of radiation of the antenna

Therefore, the power density is compliant with the limit for General Population/ Uncontrolled Exposure as specified in rule 1.1310.

If you should have any questions regarding this submission, please feel free to contact the undersigned.
