

**Appendix A: RF Exposure Compliance**

No RF Exposure Evaluation Required if power is below the following threshold:

| Tunable Range |             | Center of Tunable Band (GHz) | 60/f SAR Limitation (mW)* |
|---------------|-------------|------------------------------|---------------------------|
| f(GHz) Low    | f(GHz) High |                              |                           |
| 2.402         | 2.480       | 2.441                        | 24.58                     |

Maximum measured transmitter power:

| Pout Conducted (mW) | Maximum Antenna Gain (numeric) | Pout EIRP (mW) |
|---------------------|--------------------------------|----------------|
| 0.33                | 3.68                           | 0.77           |

Threshold at which no RF exposure evaluation is 24.58 mW (5W exposure evaluation per RSS-102, 2.5.2; 20mW for SAR evaluation per RSS-102; 2.5.1).

Maximum TX Power 0.33 mW Conducted and 0.77 mW EIRP.

Conclusion: No RF exposure evaluation is required since the maximum Transmitter Pout (both conducted and EIRP) is below the FCC and IC thresholds.
