Celltech Labs Inc. declares under its sole responsibility that this wireless portable device has demonstrated compliance with the Specific Absorption Rate (SAR) RF exposure requirements specified in FCC 47 CFR §2.1093 and Health Canada's Safety Code 6. The device was tested in accordance with the measurement standards and procedures specified in FCC OET Bulletin 65, Supplement C (Edition 01-01) and Industry Canada RSS-102 Issue 1 (Provisional) for the General Population / Uncontrolled Exposure environment. All measurements were performed in accordance with the SAR system manufacturer recommendations.

I attest to the accuracy of data. All measurements were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

This test report shall not be reproduced partially, or in full, without the prior written approval of Celltech Labs Inc. The results and statements contained in this report pertain only to the device(s) evaluated.

**Russell Pipe**  
Senior Compliance Technologist

## 1.0 INTRODUCTION

This measurement report demonstrates that the Zebra Technologies Corporation Model: AN16973-1 FHSS WLAN Module FCC ID: I28MD-QL3021 installed in Wireless Portable Printer Model: QL420 complies with the SAR (Specific Absorption Rate) RF exposure requirements specified in FCC 47 CFR §2.1093 (see reference [1]) for the General Population / Uncontrolled Exposure environment. The test procedures described in FCC OET Bulletin 65, Supplement C, Edition 01-01 (see reference [3]), and Industry Canada RSS-102 Issue 1 (Provisional) were employed. A description of the product, operating configuration, detailed summary of the test results, methodology and procedures used in the evaluation, equipment used, and the various provisions of the rules are included within this test report.

### 3.0 SAR MEASUREMENT SYSTEM

Celltech Labs Inc. SAR measurement facility utilizes the Dosimetric Assessment System (DASY™) manufactured by Schmid & Partner Engineering AG (SPEAG™) of Zurich, Switzerland. The DASY4 measurement system is comprised of the measurement server, robot controller, computer, near-field probe, probe alignment sensor, specific anthropomorphic mannequin (SAM) phantom, and various planar phantoms for brain and/or body SAR evaluations. The robot is a six-axis industrial robot performing precise movements to position the probe to the location (points) of maximum electromagnetic field (EMF). A cell controller system contains the power supply, robot controller, teach pendant (Joystick), and remote control, is used to drive the robot motors. The Staubli robot is connected to the cell controller to allow software manipulation of the robot. A data acquisition electronic (DAE) circuit performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. is connected to the Electro-optical coupler (EOC). The EOC performs the conversion from the optical into digital electric signal of the DAE and transfers data to the DASY4 measurement server. The DAE4 utilizes a highly sensitive electrometer-grade preamplifier with auto-zeroing, a channel and gain-switching multiplexer, a fast 16-bit AD-converter and a command decoder and control logic unit. Transmission to the DASY4 measurement server is accomplished through an optical downlink for data and status information and an optical uplink for commands and clock lines. The mechanical probe-mounting device includes two different sensor systems for frontal and sidewise probe contacts. The sensor systems are also used for mechanical surface detection and probe collision detection. The robot uses its own controller with a built in VME-bus computer.

Note(s):

- The measurement results were obtained with the DUT tested in the conditions described in this report. Detailed measurement data and plots showing the maximum SAR location of the DUT are reported in Appendix A.
- If the SAR measurements performed at the middle channel were ≥ 3dB below the SAR limit; SAR evaluation for the low and high channels was optional (per FCC OET Bulletin 65, Supplement C, Edition 01-01 (see reference [3])).
- Scaled SAR value to show increase in SAR based on 1/10 dB increase in measured conducted power for the high channel listed in the EMC test report (EMC conducted power levels measured at Rhein Tech Laboratories).
- Secondary peak SAR locations within 2dB of the maximum were evaluated and reported as shown in the table above table and Appendix A (SAR Test Plots) - P = Primary, S = Secondary.
- The power drift measured by the SAR measurement system was > 5%. The maximum measured power drift was added to the measured SAR levels to show scaled SAR results as listed in the above table.
- The ambient and fluid temperatures were measured prior to, and during, the fluid dielectric parameter check and the SAR evaluation. The temperatures listed were consistent for all measurement periods.
- The dielectric properties of the simulated body tissue were measured prior to the evaluation using an 85070C Dielectric Probe Kit and an 8753E Network Analyzer (see Appendix E for printout of measured fluid dielectric parameters).

## 5.0 DETAILS OF SAR EVALUATION

The Zebra Technologies Corporation Model: AN16973-1 FHSS WLAN Module FCC ID: I28MD-QL3021 installed in Wireless Portable Printer Model: QL420 was found to be compliant for localized Specific Absorption Rate based on the test provisions and conditions described below. Detailed photographs of the measurement setup are shown in Appendix H.

1. The DUT was tested for body SAR on the bottom side (battery side) of the device with the belt-clip accessory attached. The bottom side of the DUT was positioned parallel to the outer surface of the planar phantom. The belt-clip and the printer end of the DUT were touching the outer surface of the planar phantom.
2. The DUT was tested for body SAR on the bottom side (battery side) of the device with the shoulder strap accessory attached. The bottom side of the DUT was positioned parallel to, and touching, the outer surface of the planar phantom.
3. The DUT was tested for body SAR on the top side (antenna / printer side) of the device with the shoulder strap accessory attached. The top side of the DUT was positioned parallel to the outer surface of the planar phantom. A 1.0 cm separation distance was maintained between the top side of the DUT and the outer surface of the planar phantom.
4. The DUT was tested for body SAR on the front side (LCD display side) of the device with the shoulder strap accessory attached. The front side of the DUT was positioned parallel to, and touching, the outer surface of the planar phantom.
5. The DUT was tested for body SAR on the left side of the device with the shoulder strap accessory attached. The left side of the DUT was positioned parallel to, and touching, the outer surface of the planar phantom.
6. The DUT was tested for body SAR on the right side of the device with the shoulder strap accessory attached. The right side of the DUT was positioned parallel to, and touching, the outer surface of the planar phantom.
7. The DUT was placed into test mode via internal software and evaluated for SAR at maximum power with the frequency hopping disabled, on a fixed frequency, and with a modulated signal.
8. The peak conducted power levels were measured before the tests using a Gigatronics 8652A Universal Power Meter according to the procedures described in FCC 47 CFR §2.1046.
9. The power drift of the DUT measured by the SAR measurement system was > 5%. The maximum measured power drift was added to the measured SAR levels to show scaled SAR results, as shown in the test data table (page 5).
10. The DUT was tested with a fully charged battery.
11. The ambient and fluid temperatures were measured prior to, and during, the fluid dielectric parameter check and the SAR evaluation. The temperatures listed were consistent for all measurement periods.
12. The dielectric properties of the simulated tissue were measured prior to the evaluation using an 85070C Dielectric Probe Kit and an 8753E Network Analyzer (see Appendix E for printout of measured fluid dielectric parameters).
13. A stack of low-density, low-loss dielectric foamed polystyrene was used in place of the device holder.

## 6.0 EVALUATION PROCEDURES

- a. (i) The evaluation was performed in the applicable area of the phantom depending on the type of device being tested. For devices held to the ear during normal operation, both the left and right ear positions were evaluated using the SAM phantom.  
(ii) For body-worn and face-held devices a planar phantom was used.
- b. The SAR was determined by a pre-defined procedure within the DASY4 software. Upon completion of a reference and optical surface check, the exposed region of the phantom was scanned near the inner surface with a grid spacing of 15mm x 15mm.

An area scan was determined as follows:

- c. Based on the defined area scan grid, a more detailed grid is created to increase the points by a factor of 10. The interpolation function then evaluates all field values between corresponding measurement points.
- d. A linear search is applied to find all the candidate maxima. Subsequently, all maxima are removed that are >2 dB from the global maximum. The remaining maxima are then used to position the cube scans.

A 1g and 10g spatial peak SAR was determined as follows:

- e. Extrapolation is used to find the points between the dipole center of the probe and the surface of the phantom. This data cannot be measured, since the center of the dipoles is 2.7 mm away from the tip of the probe and the distance between the surface and the lowest measuring point is 1.4 mm (see probe calibration document in Appendix D). The extrapolation was based on trivariate quadratics computed from the previously calculated 3D interpolated points nearest the phantom surface.
- f. Interpolated data is used to calculate the average SAR over 1g and 10g cubes by spatially discretizing the entire measured cube. The volume used to determine the averaged SAR is a 1mm grid (42875 interpolated points).

## 7.0 SYSTEM PERFORMANCE CHECK

Prior to the SAR evaluation a system check was performed in the planar section of the SAM phantom with a 2450MHz dipole (see Appendix C for system validation procedures). The dielectric properties of the simulated brain tissue were measured using an 85070C Dielectric Probe Kit and an 8753E Network Analyzer (see Appendix E for printout of measured fluid dielectric parameters). A forward power of 250 mW was applied to the dipole and the system was verified to a tolerance of  $\pm 10\%$  (see Appendix B for system check test plot).

| SYSTEM PERFORMANCE CHECK |                       |                 |            |                                  |          |                               |          |                             |                 |                  |                  |            |                     |

- Note(s):
1. The ambient and fluid temperatures were measured prior to, and during, the fluid dielectric parameter check and the system performance check.
  2. The temperatures listed in the table above were consistent for all measurement periods.

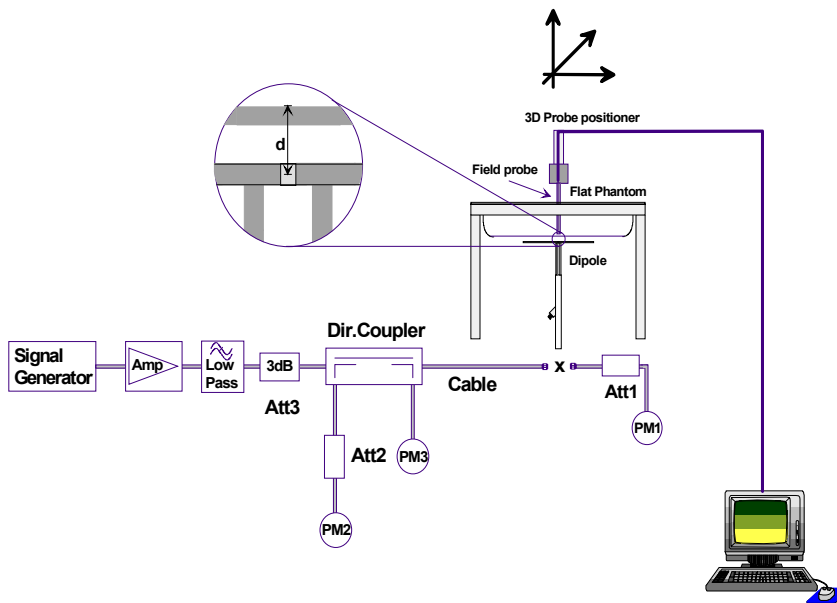

Figure 1. System Performance Check Setup Diagram

2450MHz Dipole Setup

## 8.0 SIMULATED TISSUE MIXTURES

The 2450MHz brain and body simulated tissue mixtures consist of Glycol-monobutyl, water, and salt (body mixture only). The fluid was prepared according to standardized procedures and measured for dielectric parameters (permittivity and conductivity).

| SIMULATED TISSUE MIXTURES |                                 |                                  |
|---------------------------|---------------------------------|----------------------------------|
| INGREDIENT                | 2450MHz Brain<br>(System Check) | 2450MHz Body<br>(DUT Evaluation) |
| Water                     | 55.20 %                         | 69.95 %                          |
| Glycol Monobutyl          | 44.80 %                         | 30.00 %                          |
| Salt                      | -                               | 0.05 %                           |

## 9.0 SAR SAFETY LIMITS

| EXPOSURE LIMITS  | SAR (W/kg)   |  |
|--|--|--|
|  | (General Population /<br>Uncontrolled Exposure<br>Environment) | (Occupational /<br>Controlled Exposure<br>Environment) |
| Spatial Average<br>(averaged over the whole body)                | 0.08   | 0.4  |
| Spatial Peak<br>(averaged over any 1 g of tissue)                | 1.60   | 8.0  |
| Spatial Peak<br>(hands/wrists/feet/ankles<br>averaged over 10 g) | 4.0  | 20.0   |

Notes:

1. Uncontrolled environments are defined as locations where there is potential exposure of individuals who have no knowledge or control of their potential exposure.
2. Controlled environments are defined as locations where there is potential exposure of individuals who have knowledge of their potential exposure and can exercise control over their exposure.

## 10.0 ROBOT SYSTEM SPECIFICATIONS

### Specifications

**POSITIONER:** Stäubli Unimation Corp. Robot Model: RX60L  
**Repeatability:** 0.02 mm  
**No. of axis:** 6

### Data Acquisition Electronic (DAE) System

#### Cell Controller

**Processor:** AMD Athlon XP 2400+  
**Clock Speed:** 2.0 GHz  
**Operating System:** Windows XP Professional

#### Data Converter

**Features:** Signal Amplifier, multiplexer, A/D converter, and control logic  
**Software:** DASY4 software  
**Connecting Lines:** Optical downlink for data and status info.  
 Optical uplink for commands and clock

### DASY4 Measurement Server

**Function:** Real-time data evaluation for field measurements and surface detection  
**Hardware:** PC/104 166MHz Pentium CPU; 32 MB chipdisk; 64 MB RAM  
**Connections:** COM1, COM2, DAE, Robot, Ethernet, Service Interface

### E-Field Probe

**Model:** ET3DV6  
**Serial No.:** 1387  
**Construction:** Triangular core fiber optic detection system  
**Frequency:** 10 MHz to 6 GHz  
**Linearity:**  $\pm 0.2$  dB (30 MHz to 3 GHz)

### Phantom(s)

#### Evaluation Phantom

**Type:** Planar Phantom  
**Shell Material:** Fiberglass  
**Thickness:** 2.0  $\pm$  0.1 mm  
**Volume:** Approx. 72 liters

#### Validation Phantom

**Type:** SAM V4.0C  
**Shell Material:** Fiberglass  
**Thickness:** 2.0  $\pm$  0.1 mm  
**Volume:** Approx. 20 liters

## 11.0 PROBE SPECIFICATION (ET3DV6)

|--------------------|--|
| Construction:      | Symmetrical design with triangular core<br>Built-in shielding against static charges<br>PEEK enclosure material (resistant to organic solvents, e.g. glycol) |
| Calibration:       | In air from 10 MHz to 2.5 GHz<br>In brain simulating tissue at frequencies of 900 MHz and 1.8 GHz (accuracy $\pm 8\%$ )                                      |
| Frequency:         | 10 MHz to >6 GHz; Linearity: $\pm 0.2$ dB<br>(30 MHz to 3 GHz)   |
| Directivity:       | $\pm 0.2$ dB in brain tissue (rotation around probe axis)<br>$\pm 0.4$ dB in brain tissue (rotation normal to probe axis)                                    |
| Dynamic Range:     | 5 $\mu$ W/g to >100 mW/g; Linearity: $\pm 0.2$ dB  |
| Surface Detection: | $\pm 0.2$ mm repeatability in air and clear liquids over diffuse reflecting surfaces   |
| Dimensions:        | Overall length: 330 mm<br>Tip length: 16 mm<br>Body diameter: 12 mm<br>Tip diameter: 6.8 mm<br>Distance from probe tip to dipole centers: 2.7 mm             |
| Application:       | General dosimetry up to 3 GHz<br>Compliance tests of mobile phone  |

ET3DV6 E-Field Probe

## 12.0 SAM PHANTOM V4.0C

The SAM phantom V4.0C is a fiberglass shell phantom with a 2.0 mm (+/-0.2 mm) shell thickness for left and right head and flat planar area integrated in a wooden table. The shape of the fiberglass shell corresponds to the phantom defined by SCC34-SC2. The device holder positions are adjusted to the standard measurement positions in the three sections (see Appendix F for specifications of the SAM phantom V4.0C).

SAM Phantom

## 13.0 PLANAR PHANTOM

The planar phantom is a fiberglass shell phantom with a 2.0 mm (+/-0.2mm) thick device measurement area at the center of the phantom for SAR evaluations of devices with a larger surface area than the planar section of the SAM phantom. The planar phantom is integrated in a wooden table (see Appendix G for dimensions and specifications of the planar phantom).

Planar Phantom

## 14.0 DEVICE HOLDER

The DASY device holder has two scales for device rotation (with respect to the body axis) and the device inclination (with respect to the line between the ear openings). The plane between the ear openings and the mouth tip has a rotation angle of 65°. The bottom plate contains three pair of bolts for locking the device holder. The device holder positions are adjusted to the standard measurement positions in the three sections.

Device Holder

## APPENDIX A - SAR MEASUREMENT DATA

Date Tested: 11/12/03

DUT: Zebra AN16973-1 FHSS WLAN Module installed in QL420 Wireless Portable Printer; Serial: XXQF02-12-0090  
 Ambient Temp: 23.3°C; Fluid Temp: 23.7°C; Barometric Pressure: 103.2 kPa; Humidity: 65%

Communication System: Modulated Transmit  
 RF Output Power: 20.2 dBm (Peak Conducted)  
 Frequency: 2440 MHz; Duty Cycle: 1:1  
 Medium: M2450 ( $\sigma = 2.04$  mho/m,  $\epsilon_r = 50.5$ ,  $\rho = 1000$  kg/m<sup>3</sup>)

- Probe: ET3DV6 - SN1387; ConvF(4.6, 4.6, 4.6); Calibrated: 26/02/2003
- Sensor-Surface: 4mm (Mechanical Surface Detection)
- Electronics: DAE3 Sn370; Calibrated: 19/05/2003
- Phantom: Fiberglass Planar; Type: Barski Industries; Serial: 03-01
- Measurement SW: DASY4, V4.1 Build 47; Postprocessing SW: SEMCAD, V1.6 Build 116

**Body-Worn - Bottom Side of DUT with Belt-Clip/Area Scan (13x17x1):** Measurement grid: dx=15mm, dy=15mm

**Body-Worn - Bottom Side of DUT with Belt-Clip/Zoom Scan (7x7x7)/Cube 0:**

Measurement grid: dx=5mm, dy=5mm, dz=5mm

Peak SAR (extrapolated) = 0.00565 W/kg

**SAR(1 g) = 0.00189 mW/g; SAR(10 g) = 0.00127 mW/g**

**Body-Worn - Bottom Side of DUT with Belt-Clip/Zoom Scan (7x7x7)/Cube 1:**

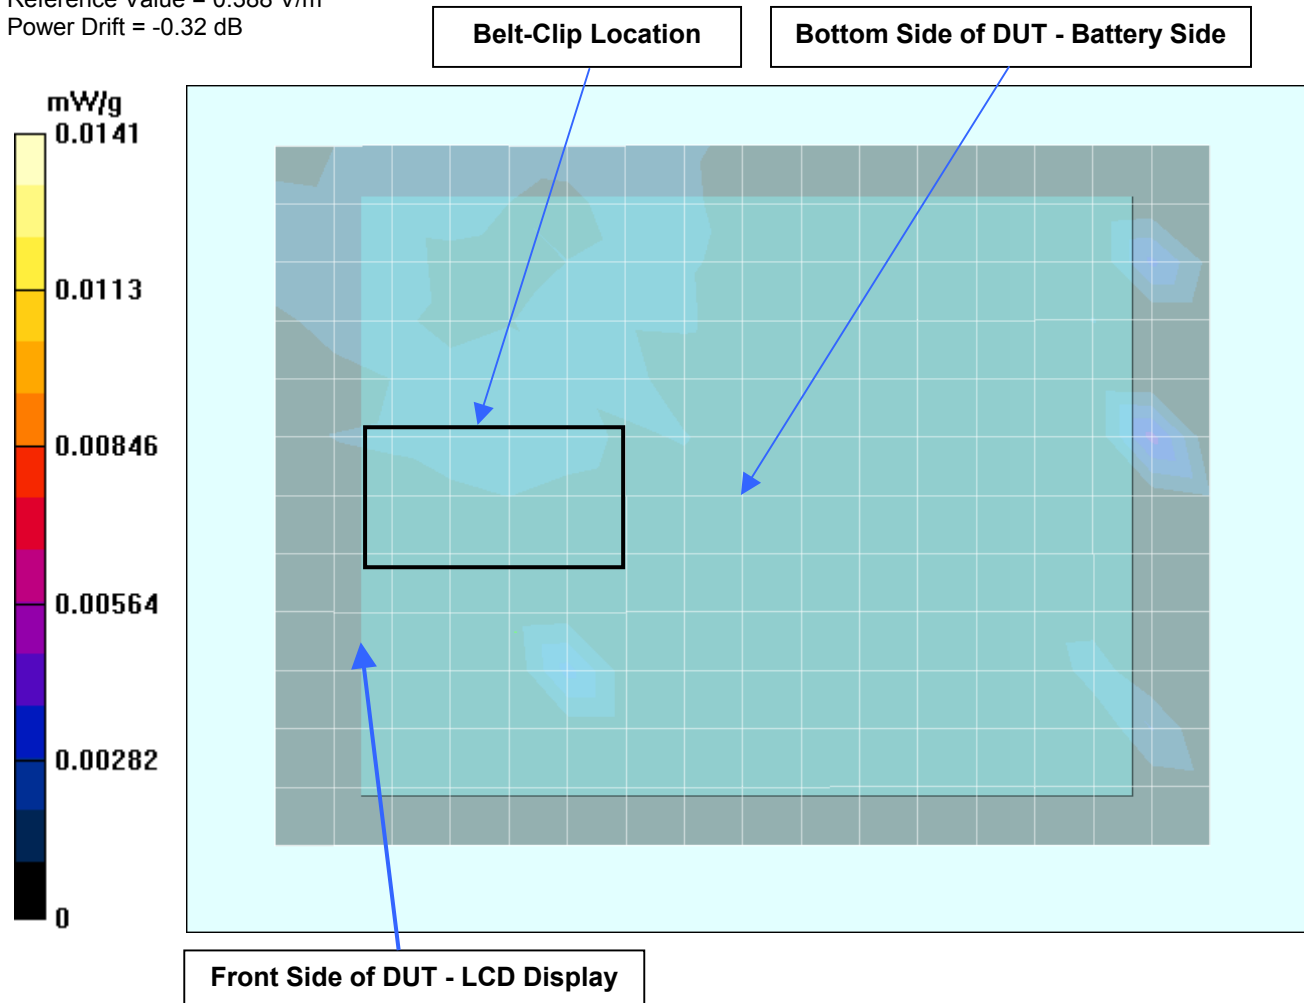

Measurement grid: dx=5mm, dy=5mm, dz=5mm

Peak SAR (extrapolated) = 0.0157 W/kg

**SAR(1 g) = 0.00189 mW/g; SAR(10 g) = 0.000694 mW/g**

Reference Value = 0.388 V/m

Power Drift = -0.32 dB

## APPENDIX C - SYSTEM VALIDATION

## 2450MHz SYSTEM VALIDATION DIPOLE

Type:

**2450MHz Validation Dipole**

Serial Number:

**150**

Place of Calibration:

**Celltech Labs Inc.**

Date of Calibration:

**September 17, 2003**

Celltech Labs Inc. hereby certifies that this device has been calibrated on the date indicated above.

Calibrated by:

*Spencer Watson*

Approved by:

*Russell W. Pipe*

## 1. Dipole Construction & Electrical Characteristics

The validation dipole was constructed in accordance with the IEEE Std “Recommended Practice for Determining the Spatial-Peak Specific Absorption Rate (SAR) in the Human Body Due to Wireless Communications Devices: Experimental Techniques”. The electrical properties were measured using an HP 8753E Network Analyzer. The network analyzer was calibrated to the validation dipole N-type connector feed point using an HP85032E Type N calibration kit. The dipole was placed parallel to a planar phantom at a separation distance of 10.0mm from the simulating fluid using a loss-less dielectric spacer. The measured input impedance is:

|                                 |   |
|---------------------------------|---|
| Feed point impedance at 2450MHz | $\text{Re}\{Z\} = 44.488\Omega$<br>$\text{Im}\{Z\} = -2.4883\Omega$ |

| 3000            | 41.5   | 25.0   | 3.6    |

## 2. Validation Phantom

The validation phantom is the SAM (Specific Anthropomorphic Mannequin) phantom manufactured by Schmid & Partner Engineering AG. The SAM phantom is a Fiberglass shell integrated in a wooden table. The shape of the shell corresponds to the phantom defined by SCC34-SC2. It enables the dosimetric evaluation of left and right hand phone usage as well as body mounted usage at the flat phantom region. A cover prevents evaporation of the liquid. Reference markings on the phantom allow the complete setup of all predefined phantom positions and measurement grids by manually teaching three points in the robot.

**Shell Thickness:** 2.0 ± 0.1 mm  
**Filling Volume:** Approx. 20 liters  
**Dimensions:** 50 cm (W) x 100 cm (L)

## 2450MHz Dipole Calibration

## 2450MHz Dipole Calibration

### **3. Measurement Conditions**

The planar phantom was filled with brain simulating tissue having the following electrical parameters at 2450MHz:

|                        |            |
|------------------------|------------|
| Relative Permittivity: | 37.3       |
| Conductivity:          | 1.88 mho/m |
| Ambient Temperature:   | 21.6°C     |
| Fluid Temperature:     | 23.9°C     |
| Fluid Depth:           | ≥ 15cm     |

The 2450MHz simulating tissue consists of the following ingredients:

| <b>Ingredient</b>                       | <b>Percentage by weight</b>   |
|---|---|
| Water                                   | 52.00%  |
| Glycol Monobutyl                        | 48.00%  |
| Target Dielectric Parameters<br>at 22°C | $\epsilon_r = 39.2 (+/-5\%)$<br>$\sigma = 1.80 \text{ S/m } (+/-5\%)$ |

#### 4. SAR Measurement

The SAR measurement was performed with the E-field probe in mechanical detection mode only. The setup and determination of the forward power into the dipole was performed using the following procedures.

First, the power meter PM1 (including attenuator Att1) is connected to the cable to measure the forward power at the location of the dipole connector (X). The signal generator is adjusted for the desired forward power at the dipole connector (taking into account the attenuation of Att1) as read by power meter PM2. After connecting the cable to the dipole, the signal generator is readjusted for the same reading at power meter PM2. If the signal generator does not allow adjustment in 0.01dB steps, the remaining difference at PM2 must be taken into consideration. PM3 records the reflected power from the dipole to ensure that the value is not changed from the previous value. The reflected power should be 20dB below the forward power.

Ten SAR measurements were performed in order to achieve repeatability and to establish an average target value.

### Validation Dipole SAR Test Results

| Validation Measurement | SAR @ 0.25W Input averaged over 1g | SAR @ 1W Input averaged over 1g | SAR @ 0.25W Input averaged over 10g | SAR @ 1W Input averaged over 10g | Peak SAR @ 0.25W Input |

Communication System: CW  
Frequency: 2450 MHz; Duty Cycle: 1:1  
Medium: HSL2450 ( $\sigma = 1.88$  mho/m,  $\epsilon_r = 37.3$ ,  $\rho = 1000$  kg/m<sup>3</sup>)

- Probe: ET3DV6 - SN1387; ConvF(5, 5, 5); Calibrated: 26/02/2003
- Sensor-Surface: 4mm (Mechanical And Optical Surface Detection)
- Electronics: DAE3 Sn370; Calibrated: 19/05/2003
- Phantom: SAM front; Type: SAM 4.0; Serial: 1033
- Measurement SW: DASY4, V4.1 Build 47; Postprocessing SW: SEMCAD, V1.6 Build 116

**Probe SN1387 Validation at 2450 MHz/Area Scan (6x10x1):** Measurement grid: dx=10mm, dy=10mm

**Probe SN1387 Validation at 2450 MHz/Zoom Scan (7x7x7)/Cube 0:** Measurement grid: dx=5mm, dy=5mm, dz=5mm  
Peak SAR (extrapolated) = 29.5 W/kg  
**SAR(1 g) = 13.9 mW/g; SAR(10 g) = 6.27 mW/g**  
Reference Value = 96.7 V/m  
Power Drift = -0.08 dB

## APPENDIX D - PROBE CALIBRATION

Client **Celltech Labs**

**CALIBRATION CERTIFICATE**

Object(s) **ET3DV6 - SN: 1387**

Calibration procedure(s) **QA CAL-01.v2  
 Calibration procedure for dosimetric E-field probes**

Calibration date: **February 26, 2003**

Condition of the calibrated item **In Tolerance (according to the specific calibration document)**

This calibration statement documents traceability of M&TE used in the calibration procedures and conformity of the procedures with the ISO/IEC 17025 international standard.

All calibrations have been conducted in the closed laboratory facility: environment temperature 22 +/- 2 degrees Celsius and humidity < 75%.

Calibration Equipment used (M&TE critical for calibration)

| Model Type                        | ID #         | Cal Date                         | Scheduled Calibration  |
|-----------------------------------|--------------|----------------------------------|------------------------|
| RF generator HP 8684C             | US3642U01700 | 4-Aug-99 (in house check Aug-02) | In house check: Aug-05 |
| Power sensor E4412A               | MY41495277   | 8-Mar-02                         | Mar-03                 |
| Power sensor HP 8481A             | MY41092180   | 18-Sep-02                        | Sep-03                 |
| Power meter EPM E4419B            | GB41293874   | 13-Sep-02                        | Sep-03                 |
| Network Analyzer HP 8753E         | US38432426   | 3-May-00                         | In house check: May 03 |
| Fluke Process Calibrator Type 702 | SN: 6295803  | 3-Sep-01                         | Sep-03                 |

Calibrated by: **Name: Nico Vetterli, Function: Technician, Signature: [Handwritten Signature]**

Approved by: **Katja Pokovic, Laboratory Director, [Handwritten Signature]**

Date issued: February 26, 2003

This calibration certificate is issued as an intermediate solution until the accreditation process (based on ISO/IEC 17025 International Standard) for Calibration Laboratory of Schmid & Partner Engineering AG is completed.

# Probe ET3DV6

## SN:1387

|                   |                    |
|-------------------|--------------------|
| Manufactured:     | September 21, 1999 |
| Last calibration: | February 22, 2002  |
| Recalibrated:     | February 26, 2003  |

**Calibrated for DASY Systems**

(Note: non-compatible with DASY2 system!)

## DASY - Parameters of Probe: ET3DV6 SN:1387

### Sensitivity in Free Space

|       |   |
|-------|---|
| NormX | <b>1.55</b> $\mu\text{V}/(\text{V}/\text{m})^2$ |
| NormY | <b>1.65</b> $\mu\text{V}/(\text{V}/\text{m})^2$ |
| NormZ | <b>1.64</b> $\mu\text{V}/(\text{V}/\text{m})^2$ |

### Diode Compression

|       |           |    |
|-------|-----------|----|
| DCP X | <b>92</b> | mV |
| DCP Y | <b>92</b> | mV |
| DCP Z | <b>92</b> | mV |

### Sensitivity in Tissue Simulating Liquid

|             |                              |                             |                                       |
|-------------|------------------------------|-----------------------------|---------------------------------------|
| <b>Head</b> | <b>900 MHz</b>               | $\epsilon_r = 41.5 \pm 5\%$ | $\sigma = 0.97 \pm 5\% \text{ mho/m}$ |
| <b>Head</b> | <b>835 MHz</b>               | $\epsilon_r = 41.5 \pm 5\%$ | $\sigma = 0.90 \pm 5\% \text{ mho/m}$ |
| ConvF X     | <b>6.6</b> $\pm 9.5\%$ (k=2) | Boundary effect:            |                                       |
| ConvF Y     | <b>6.6</b> $\pm 9.5\%$ (k=2) | Alpha                       | <b>0.37</b>                           |

| Serial Number:          | <b>1387</b>              |
| Place of Assessment:    | <b>Zurich</b>            |
| Date of Assessment:     | <b>February 28, 2003</b> |
| Probe Calibration Date: | <b>February 26, 2003</b> |

Schmid & Partner Engineering AG hereby certifies that conversion factor(s) of this probe have been evaluated on the date indicated above. The assessment was performed using the FDTD numerical code SEMCAD of Schmid & Partner Engineering AG. Since the evaluation is coupled with measured conversion factors, it has to be recalculated yearly, i.e., following the re-calibration schedule of the probe. The uncertainty of the numerical assessment is based on the extrapolation from measured value at 900 MHz or at 1800 MHz.

**APPENDIX F - SAM PHANTOM CERTIFICATE OF CONFORMITY**

# Schmid & Partner Engineering AG

Zeughausstrasse 43, 8004 Zurich, Switzerland, Phone +41 1 245 97 00, Fax +41 1 245 97 79

## Certificate of conformity / First Article Inspection

|                       |  |
|-----------------------|--|
| Item                  | SAM Twin Phantom V4.0  |
| Type No               | QD 000 P40 BA  |
| Series No             | TP-1002 and higher   |
| Manufacturer / Origin | Untersee Composites<br>Hauptstr. 69<br>CH-8559 Fruthwilen<br>Switzerland |

### Tests

The series production process used allows the limitation to test of first articles. Complete tests were made on the pre-series Type No. QD 000 P40 AA, Serial No. TP-1001 and on the series first article Type No. QD 000 P40 BA, Serial No. TP-1006. Certain parameters have been retested using further series units (called samples).

| Test                 | Requirement   | Details  | Units tested              |
|----------------------|---|--|---------------------------|
| Shape                | Compliance with the geometry according to the CAD model.                                | IT'IS CAD File (*)   | First article, Samples    |
| Material thickness   | Compliant with the requirements according to the standards                              | 2mm +/- 0.2mm in specific areas                                      | First article, Samples    |
| Material parameters  | Dielectric parameters for required frequencies  | 200 MHz – 3 GHz<br>Relative permittivity < 5<br>Loss tangent < 0.05. | Material sample TP 104-5  |
| Material resistivity | The material has been tested to be compatible with the liquids defined in the standards | Liquid type HSL 1800 and others according to the standard.           | Pre-series, First article |

### Standards

- [1] CENELEC EN 50361
- [2] IEEE P1528-200x draft 6.5
- [3] IEC PT 62209 draft 0.9

(\*) The IT'IS CAD file is derived from [2] and is also within the tolerance requirements of the shapes of [1] and [3].

### Conformity

Based on the sample tests above, we certify that this item is in compliance with the uncertainty requirements of SAR measurements specified in standard [1] and draft standards [2] and [3].

## FIBERGLASS FABRICATORS

### Certificate of Conformity

Item : Flat Planar Phantom Unit # 03-01  
Date: June 16, 2003  
Manufacturer: Barski Industries (1985 Ltd)

| Test                | Requirement  | Details   |
|---------------------|--|---|
| Shape               | Compliance to geometry according to drawing  | Supplied CAD drawing  |
| Material Thickness  | Compliant with the requirements  | 2mm +/- 0.2mm in measurement area                             |
| Material Parameters | Dielectric parameters for required frequencies<br>Based on Dow Chemical technical data | 100 MHz-5 GHz<br>Relative permittivity<5<br>Loss Tangent<0.05 |

#### Conformity

Based on the above information, we certify this product to be compliant to the requirements specified.
