LOW POWER LICENCE-EXEMPT RADIO COMMUNICATION DEVICES
(ALL FREQUENCY BANDS)

RADIO STANDARDS SPECIFICATION
RSS-210, ISSUE 5
NOVEMBER 2001

THE FOLLOWING "MEETS" THE ABOVE TEST SPECIFICATION

Formal Name: R110XiIII Plus
Kind of Equipment: Thermal Transfer on demand bar code printer
Test Configuration: RFID - HF 13.56 MHz (Tested at 120 vac, 60 Hz)
Model Number(s): 110XiIII
Model(s) Tested: 110XiIII
Serial Number(s): 91C04220027
Date of Tests: July 8, 9, 27 & September 7, 2004
Test Conducted For: Zebra Technologies Corporation
333 Corporate Woods Parkway
Vernon Hills, Illinois 60061

NOTICE: "This report must not be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government". Please see the "Additional Description of Equipment Under Test" page listed inside of this report. This report must not be reproduced (except in full), without the approval of D.L.S. Electronic Systems.

1.0 SUMMARY OF TEST REPORT

It was found that the R110XiIII Plus, Model Number(s) 110XiIII, "meets" the radio interference conducted and radiated emission requirements of the Radio Standards Specification for Low Power Licence-Exempt Radio Communication Devices (All Frequency Bands).

This test report relates only to the items tested and contains the following number of pages.

Text: 81

2.0 INTRODUCTION

On July 8 & 9, 2004, a series of radio frequency interference measurements was performed on R110XiIII Plus, Model Number(s) 110XiIII, Serial Number: 91C04220027. The tests were performed according to the procedures of the Industry Canada, Radio Standards Specification as stated in RSS-210, Issue 5, November 2001. Tests were completed by personnel of D.L.S. Electronic Systems, Inc. who are responsible to Donald L. Sweeney, Senior EMC Engineer.

3.0 TEST SET-UP

All emission tests were performed at D.L.S. Electronic Systems, Inc. and set up according to RSS-212, Issue 1 (Provisional), February 27, 1999. All conducted emissions tests (if required) were performed in a shield enclosure at D.L.S. Electronic Systems, Inc. as stated in Section 5. The power line supplied was connected to a dual line impedance network located on the floor, a ground plane. The only ground supplied to the unit was through the third wire of the standard power cord when supplied.

All radiated emission tests were performed with the test item placed on a rotating wooden table, located in the Test Room as stated in RSS-212, Issue 1 (Provisional), February 27, 1999, Section 3. Equipment normally operated on the floor was placed on top of the rotating platform, less than 30 centimeters above the floor.

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

4.0 TEST EQUIPMENT (Bandwidths and Detector Function)

All preliminary data below 1000 MHz was automatically plotted using the HP Spectrum Analyzer or ESI 26/40 Fixed Tuned Receiver. The data was taken using Peak, Quasi-Peak or the Average Detector Functions as required. This information was then used to determine the frequencies of maximum emissions. Above 1000 MHz, final data was taken using the Average Detector.

Below 1000 MHz, final data was taken using the HP Spectrum Analyzer and/or ESI 26/40 Fixed Tuned Receiver. These plots were made using the Peak or Quasi-Peak Detector functions, with manual measurements performed on the questionable frequencies using the Quasi-Peak or the Average Detector Function of the Analyzer or ESI 26/40 Fixed Tuned Receiver as required. Above 1000 MHz, final data was taken using the Average Detector on the Spectrum Analyzer.

The bandwidths shown below are specified by ANSI C63.4-2000, Section 4.2.

Frequency Range	Bandwidth (-6 dB)
10 to 150 kHz	200 Hz
150 kHz to 30 MHz	9 kHz
30 MHz to 1 GHz	120 kHz
Above 1 GHz	1 MHz

A list of the equipment used can be found in Table 1. All primary equipment was calibrated against known reference standards with a verified traceable path to NIST.

5.0 DESCRIPTION OF TEST SAMPLE: (See also Paragraph 6.0)

5.1 Description:

Zebra R110XiIII is a RFID Thermal Transfer on demand printer. Capable of printing RFID labels. Printer powered through an IEC 320 connector, from 90-264 VAC, 47-63 Hz. Printer uses ZPL programming language, capable of receiving data via Serial connector, Parallel connector (covered when other communications options are installed). For this test the Ethernet print server option is installed and used for sending data packets of label data to the printer, from a Dell Laptop Computer.

5.2 PHYSICAL DIMENSIONS OF EQUIPMENT UNDER TEST

Long 49.5cm x Width: 26.3 cm x High: 39.5 cm

5.3 LINE FILTER USED:

Yunpen YL06T1, Corcom 6EGG
High - Low 06SS3-SR-Q

5.4 INTERNAL CLOCK FREQUENCIES:

Switching Power Supply Frequencies:

46 KHz, 56 KHz, 100 kHz

Clock Frequencies:

3.6469 MHz, 8.0 MHz, 13.56 MHz, 16.0 MHz, 25.0 MHz
27.12 MHz, 32 MHz, 33 MHz, 66 MHz, & 133 MHz

Company: Zebra Technologies Corporation
Model Tested: 110XiIII

9.0 RESULTS OF TESTS

The radio interference emission charts results can be seen on the pages at the end of this report. Data sheets indicating the test measurements taken during testing can also be found at the end of this report. Those points on the emission charts shown with a yellow mark are background frequencies which were verified during testing.

10.0 CONCLUSION

It was found that the R110XiIII Plus, Model Number(s) 110XiIII "meets" the radio interference conducted and radiated emission requirements of the Radio Standards Specification RSS-210, Issue 5, for Low Power Licence-Exempt Radio Communication Devices (All Frequency Bands).

APPENDIX A

TEST PROCEDURE

ELECTRIC FIELD RADIATED EMISSIONS TEST

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

APPENDIX A

1.0 SUPPLY VOLTAGE – (Section 5.2)

Tests were performed with the test sample's supply voltage set at **120 vac.**

2.0 TYPES OF MODULATION – (Section 5.4)

Modulation used: **NA (This is a Spread Spectrum Transmitter)**

3.0 EMISSION BANDWIDTH - (Section 5.9)

Where indicated, the 20 dB bandwidth is measured at the points when the spectral density of the signal is 20 dB down from the inband spectral density of the modulated signal, with the transmitter modulated by a representative signal. An alternative to the 20 dB bandwidth is the 99% emission bandwidth is determined such that below the lower and above its upper frequency limits, the mean powers emitted are each equal to .5% of the total mean power of the emission.

See the following graphs for actual measurements made:

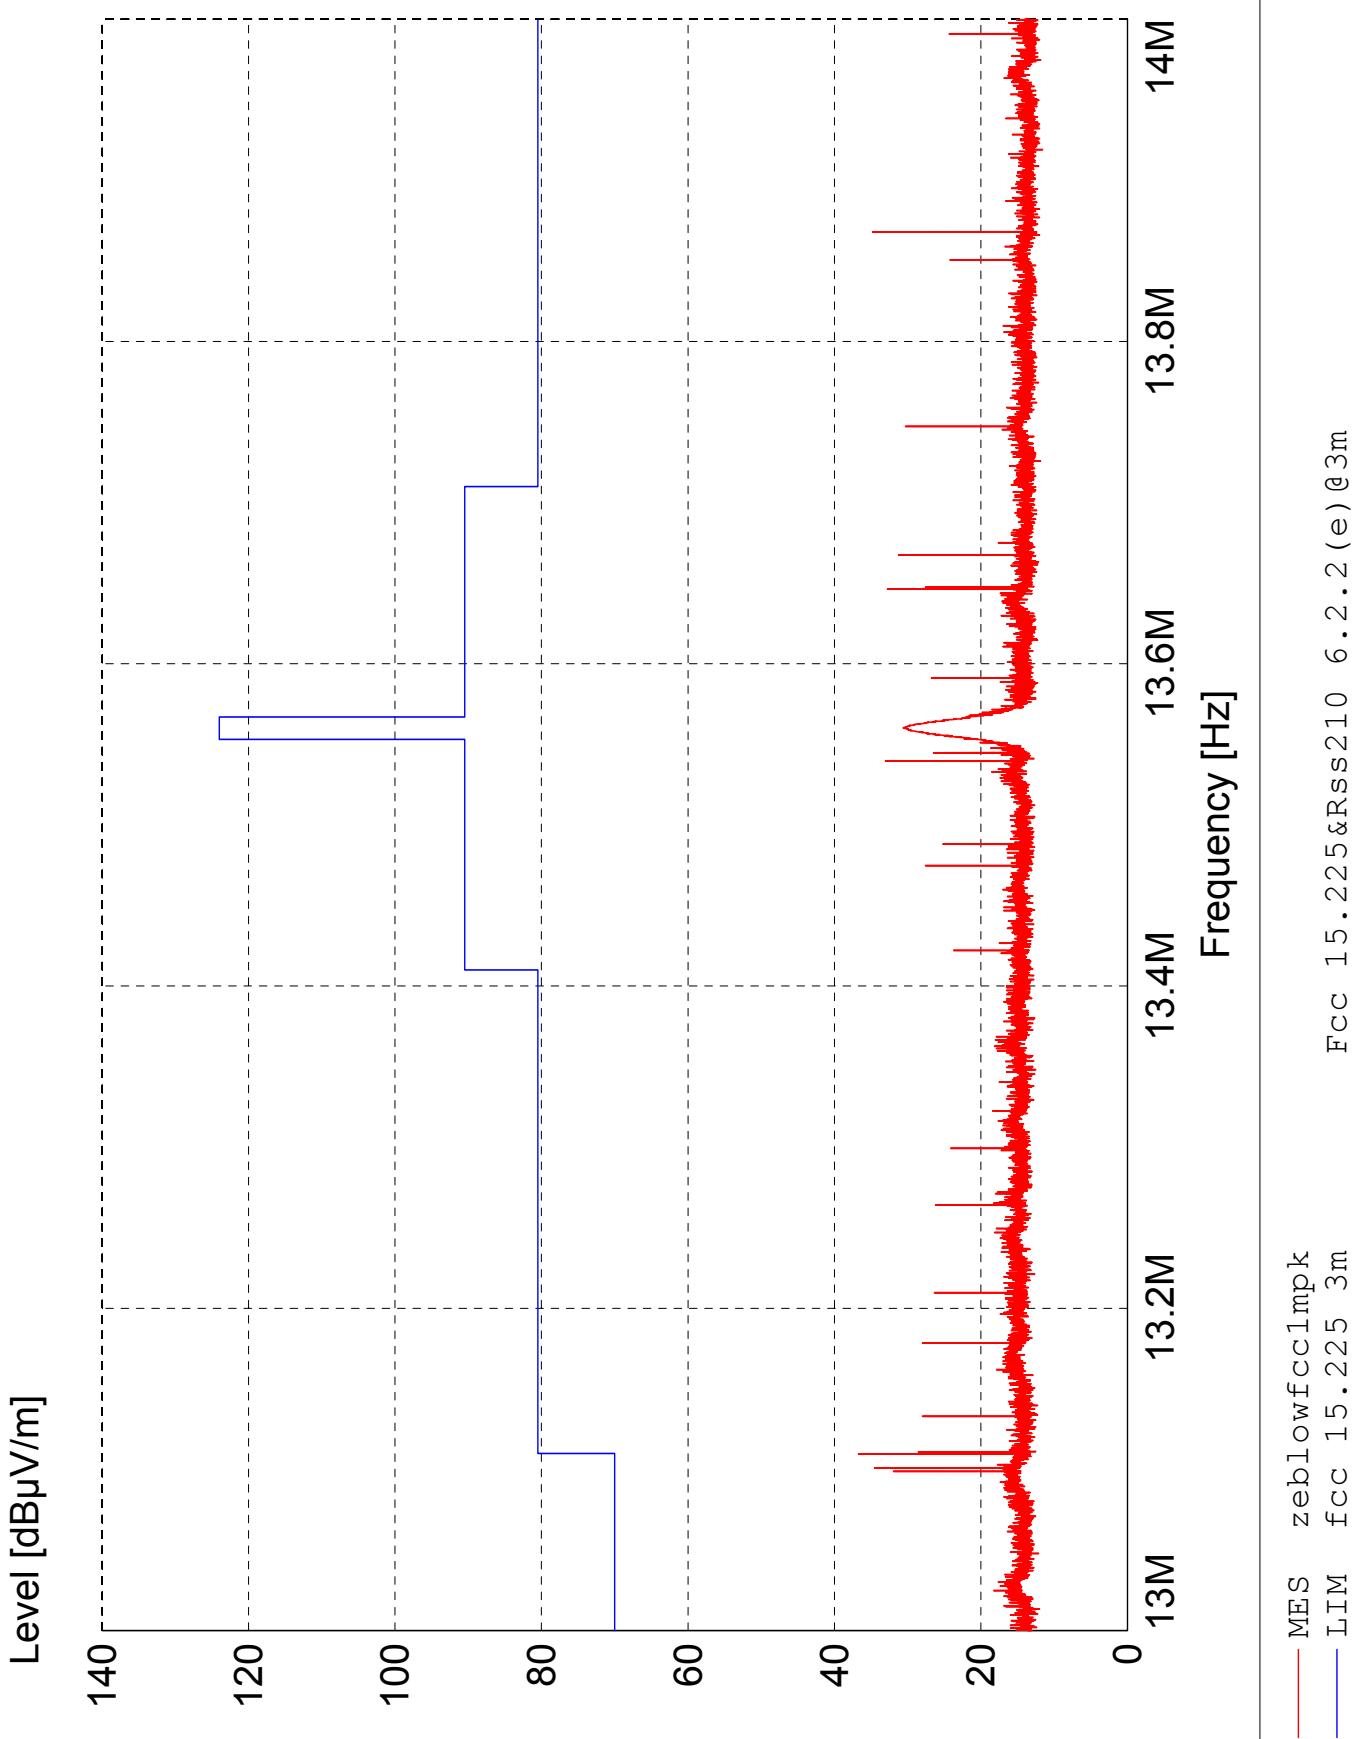

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

APPENDIX A

GRAPH(S) TAKEN OF THE EMISSION BANDWIDTH

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

APPENDIX A

4.0 FREQUENCY RANGE - (Section 6.2)

The measured frequency range of the R110XiIII Plus is **9 kHz TO 2000 MHz**, using the Hewlett/Packard 8566B Spectrum Analyzer.

5.0 DC POWER CONSUMPTION METHOD - (Section 12)

As stated in Section 12, an indirect transmitter mean output power measurement can be made if the transmission is continuous during the measurement. The average input power into the final RF stage is to be measured, i.e. measure the DC input power. The transmitter mean output power is then taken as 50% of this input power.

DC Voltages and Currents for the final RF Stage:

NOTE:

This measurement was not made at D.L.S. Electronic Systems, Inc.

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

APPENDIX A

6.0 TRANSMITTER AC WIRELINE CONDUCTED EMISSIONS (Section 6.6)

Name of Test:

RSS-210 Section Number: Section 6.6

Minimum Standard:

On any frequency or frequencies within the band of .45-30 MHz, the measured RF voltage shall not exceed 250 microvolts across 50 ohms.

Test Results:

The R110XiIII Plus "meets" the minimum requirements of RSS-210, Section 6.6 (a)

Test Conditions:

The emissions were measured with a 50 ohm/50 microhenry line impedance stabilization network, Section 9

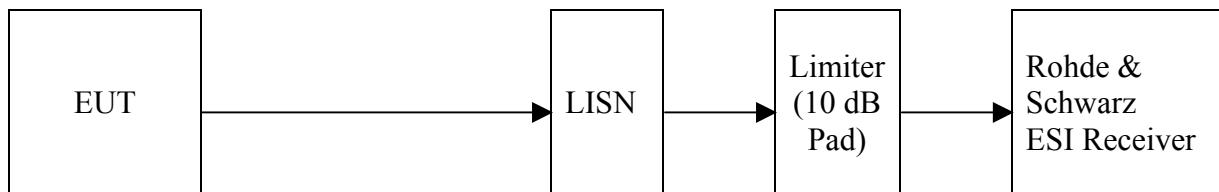

NOTE:

All test measurements were made at a screen room temperature of 71°F at 602% relative humidity.

Test Equipment:

Rohde & Schwarz Receiver
Solar LISN (50 ohm/50 Microhenry)
Electrometrics Limiter with internal 10 dB Pad

Block Diagram of Test Set-Up

Measurement Data:

APPENDIX A

7.0 RESTRICTED BANDS

As stated in Section 6.3, the fundamental emission from the R110XiIII Plus shall not fall within any of the bands listed below:

Frequency in MHz	Frequency in MHz	Frequency in MHz	Frequency in GHz
.0900 to .1100	162.0125 to 167.17	2310.0 to 2390	9.30 to 9.50
.4900 to .5100	167.7200 to 173.20	2483.5 to 2500	10.60 to 12.70
2.1735 to 2.1905	240.000 to 285.00	2655.0 to 2900	13.25 to 13.40
8.362 to 8.3660	322.200 to 335.40	3260.0 to 3267	14.47 to 14.50
13.36 to 13.410	399.900 to 410.00	3332.0 to 3339	15.35 to 16.20
25.50 to 25.670	608.000 to 614.00	3345.8 to 3358	17.70 to 21.40
37.50 to 38.250	960.000 to 1240.00	3600.0 to 4400	22.01 to 23.13
73.00 to 75.500	1300.000 to 1427.00	4500.0 to 5250	23.60 to 24.00
108.00 to 121.94	1435.000 to 1626.50	5350.0 to 5450	31.20 to 31.80
123.00 to 138.00	1660.000 to 1710.00	7250.0 to 7750	36.43 to 36.50
149.90 to 150.00	1718.800 to 1722.20	8025.0 to 8500	ABOVE 38.60
156.70 to 156.90	2200.000 to 2300.00	9000.0 to 9200	

NOTE:

The noise floor within the Restricted Bands for the EMC Receiver and HP Spectrum Analyzer will typically lay 20 dB below the limit.

8.0 BAND EDGE AND RESTRICT BAND COMPLIANCE

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the attenuation below the general limits specified in Tables 3 & 7 are not required.

The field strength of any **radiated emissions** which fall within the restricted bands shall not exceed the general radiated emissions limits as stated Section 6.3.

NOTE: All emissions from the R110XiIII Plus are under the limits of Tables 3 & 7 and comply with the Restrict Band requirements of Table 2:

Company: Zebra Technologies Corporation
Model Tested: 110XiIII
Report Number: 10928

1250 Peterson Dr., Wheeling, IL 60090

APPENDIX A

9.0 CONDUCTED SPURIOUS EMISSIONS MEASUREMENTS MADE AT ANTENNA TERMINALS (Section 10.0).

Name of Test:

RSS-210 Section Number: Section 10.0

Minimum Standard:

The measured RF emissions shall not exceed the required levels stated in Section 6.

Test Results:

The R110XiIII Plus "meets" the minimum requirements of RSS-210, Section 6.1.1 (b)

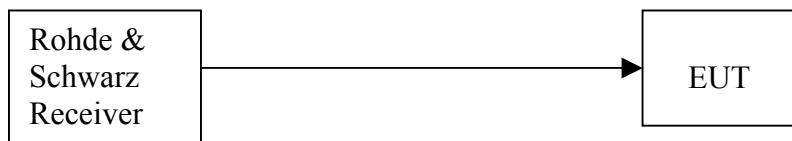

Test Conditions:

The emissions were measured at the antenna terminals by replacing the antenna with a spectrum analyzer of internal resistance equal to the impedance specified for the antenna using the test procedures from RSS-210, Section 10.

Test Equipment:

Rohde & Schwarz Receiver

Block Diagram of Test Set-Up

Measurement Data:

APPENDIX A

10.0 RADIATED SPURIOUS EMISSIONS - (Section 6.2.2)

Name of Test:

RSS-210 Section Number: Section 6.2.2

Minimum Standard:

The measured RF emissions shall not exceed the required levels stated in Section 6.2.2, Table 3

Test Results:

The R110XiIII Plus "meets" the minimum requirements of RSS-210, Section 6.2.2 (e)

Test Conditions:

The emissions were measured in an open field test site located at Genoa City, Wisconsin, Industry Canada File Number: IC 2060-1 (Site #1), IC 2060-2 (Site #2), & IC 2060-3 (Site #3), with the R110XiIII Plus set at 3 meters from the antenna using the test procedures from RSS-210, Section 6.1.1 (b) and RSS-210, Section 11.

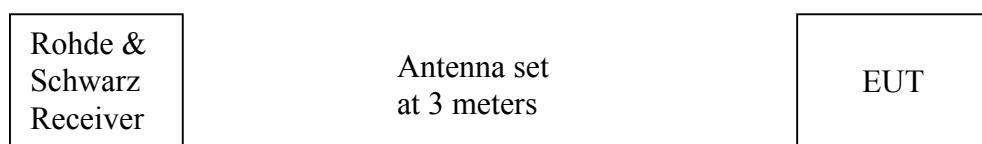

NOTE:

All radiated emissions measurements were made at a test room temperature of **64°F** at **66%** relative humidity.

Test Equipment:

Rohde & Schwarz Receiver

APPENDIX A

11.0 FREQUENCY STABILITY (Temperature) - (Section 6.4)

The frequency stability was measured from -20° to $+50^{\circ}$ centigrade at intervals of 10° centigrade throughout the range. Prior to each frequency measurement, the equipment was left alone for a sufficient period of time (approximately 30 minutes or more) to allow the components of the R110XiIII Plus oscillator circuitry to stabilize. The following information was taken:

FREQUENCY STABILITY FOR TEMPERATURE VARIATION IN MHz (Section 6.4a):

-20°	13.560501
-10°	13.560501
0°	13.560501
$+10^{\circ}$	13.560501
$+20^{\circ}$	13.560501
$+30^{\circ}$	13.560501
$+40^{\circ}$	13.560501
$+50^{\circ}$	13.560501

Worst Case Variance: = 0 Hz

As stated in RSS-210, Issue 5, Section 6.4, the Frequency Tolerance for this frequency range are as follows:

$$\text{Frequency Tolerance: } = \underline{0}$$

$$\text{Ambient Frequency: } = \underline{0} \text{ Hz}$$

$$\text{Limit} = 0 * \underline{0} = 0.0 \text{ Hz}$$

$$\text{Margin: } 0 - \underline{0.0} = \underline{\textbf{0.0 Hz}}$$

This is well within the specified limits.

APPENDIX A

12.0 FREQUENCY STABILITY (Voltage Variation) - (Section 6.4)

The frequency stability was measured at +20° centigrade by varying the primary supply voltage from 85% to 115% of nominal value for all equipment other than hand carried battery equipment.

FREQUENCY STABILITY FOR VOLTAGE VARIATION (Section 6.4b):

85%	13.560501
100%	13.560501
115%	13.560501

NOTE: This is well inside the specified limits.

FREQUENCY STABILITY FOR HAND HELD DEVICES:

For handheld battery operated equipment (cannot be plugged into the power mains), the frequency stability tests were made using a new battery, eliminating the need to vary the power supply by $\pm 15\%$.

Fresh Battery verses Battery end point:

Frequency #1
Frequency #2
Frequency #3

As stated in RSS-210, Section 6.4 the Frequency Tolerance for this frequency range is:

Frequency Tolerance: = **0**

Limit: = **0.0**

This test was not run since the device is connect to the AC power line.
