1. RF Exposure Evaluation

1.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b).

LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency Range | Electric Field | Magnetic Field | Power Density | Average Time | | | |
|--|----------------------|-------------------|---------------|--------------|--|--|--|
| (MHz) | Strength (V/m) | Strength (A/m) | (mW/cm^2) | (Minutes) | | | |
| (A) Limits for Occupational/ Control Exposures | | | | | | | |
| 300-1500 | | | F/300 | 6 | | | |
| 1500-100,000 | | | 5 | 6 | | | |
| (B) Limits for Gener | al Population/ Uncon | trolled Exposures | | | | | |
| 300-1500 | | | F/1500 | 30 | | | |
| 1500-100,000 | | | 1 | 30 | | | |

F= Frequency in MHz

Friis Formula

Friis transmission formula: $Pd = (Pout*G)/(4*Pi*R^2)$

Where

 $Pd = power density in mW/cm^2$

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd is the limit of MPE, 1 mW/cm². If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 23°C and 58% RH.
