# **RF Exposure Evaluation Declaration**

## Product: 802.11n Wireless ADSL2+ 4-port Gateway

#### Test Item: RF Exposure Evaluation Declaration

#### 1. RF Exposure Evaluation

#### 1.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

| LIMITS FOR | MAXIMUM | PERMISSIBLE | EXPOSURE ( | MPF) |
|------------|---------|-------------|------------|------|
|            |         |             |            |      |

|   |  | ```               | ,                |                              |  |
|---|--|-------------------|------------------|------------------------------|--|
| Frequency   | Electric<br>Field                              | Magnetic<br>Field | Power<br>Density | Average<br>Time<br>(Minutes) |  |
| Range (MHz)   | Strength                                       | Strength          | (mW/cm2)         |                              |  |
|   | (V/m)  | (A/m)             | (                |                              |  |
| (A) Limits for C  | (A) Limits for Occupational/ Control Exposures |                   |                  |                              |  |
| 300-1500  |  |                   | F/300            | 6                            |  |
| 1500-100,000  |  |                   | 5                | 6                            |  |
| (B) Limits for General Population/ Uncontrolled Exposures |  |                   |                  |                              |  |
| 300-1500  |  |                   | F/1500           | 6                            |  |
| 1500-100,000  |  |                   | 1                | 30                           |  |

F= Frequency in MHz

Friis Formula

Friis transmission formula:  $Pd = (Pout^{*}G)/(4^{*}pi^{*}r^{2})$ 

Where

Pd = power density in mW/cm2

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd id the limit of MPE, 1 mW/cm2. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

#### 1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity:  $18^\circ\!{\rm C}\,and\,78\%\,$  RH.

### 1.3. EUT Operation condition

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

#### 1.4. Test Result of RF Exposure Evaluation

#### Antenna Gain:

antenna type: Dipole antenna antenna antenna gain: 6.0dBi

#### Output Power Into Antenna & RF Exposure Evaluation Distance:

1) 802.11b

Test date:

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at R = 20 cm<br>(mW/cm2) |
|---------|----------------------------|---------------------------------|--|
| 01      | 2412.00                    | 31.0456                         | 0.0245883                              |
| 06      | 2437.00                    | 30.8319                         | 0.0244191                              |
| 11      | 2462.00                    | 31.6228                         | 0.0250455                              |

#### 2) 802.11g

Test date:

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at R = 20 cm<br>(mW/cm2) |
|---------|----------------------------|---------------------------------|--|
| 01      | 2412.00                    | 55.2077                         | 0.0437249                              |
| 06      | 2437.00                    | 58.7489                         | 0.0465296                              |
| 11      | 2462.00                    | 58.7489                         | 0.0465296                              |

# 3) 802.11n(20MHz)

# Test date:

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at R = 20 cm<br>(mW/cm2) |
|---------|----------------------------|---------------------------------|--|
| 01      | 2412.00                    | 48.5289                         | 0.0384352                              |
| 06      | 2437.00                    | 38.4592                         | 0.0304600                              |
| 11      | 2462.00                    | 40.3645                         | 0.0319690                              |

# 5) 802.11n(40MHz)

Test date:

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at R = 20 cm<br>(mW/cm2) |
|---------|----------------------------|---------------------------------|--|
| 03      | 2422.00                    | 40.0867                         | 0.0317490                              |
| 06      | 2437.00                    | 35.6451                         | 0.0282312                              |
| 09      | 2452.00                    | 36.8978                         | 0.0292233                              |
