

Attention:
Application Examiner

Applicant: LoJack Corporation

FCC ID: IDI-VLU07
Model RLU7

To whom it may concern,

LoJack Corporation is applying for a permissive change to the IDI-VLU07 family. The Model RLU7 is a VLU7 Transponder with 2 changes.

The first change is cosmetic. The RLU7 has been refitted into a case that is designed for the harsh environment in the commercial applications. The more roust case has significantly larger mounting flanges that will sustain the vibrations seen in commercial equipment. The RLU7 has also been outfitted with "O" ring gaskets to further seal out moisture after installation.

The second change incorporated was a shorter antenna. Due to the nature of the installations a shorter antenna was required to maintain our "invisibility of the installation".
