Subject: 5G FR1 (Sub-6GHz) OTT VoIP HAC Attestation
FCC ID: IHDT56AA5

To Whom It May Concern,

This handset is designed to exhibit similar audio intensity levels for OTT VoIP calls made over 4G LTE data connections and over 5G FR1 data connections.

The results using ABM1 values obtained from OTT connections over LTE bands and ABM2 values for 5G FR1 connections over the same bands, while maintaining a S+N/N margin of 3db or greater from the rating threshold is a reasonable representation of the HAC rating over these 5G FR1 connections.

This device doesn't support VoNR over IMS service.

Should you have any questions comments about the above, please contact the undersigned.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeff Narducci', written over a horizontal line.
