2 Re-use of Measured Data

2.1 Introduction Section

This application re-uses data collected on a similar device. The subject device of this application based on reference FCC ID IHDT56AC2/IHDT56AC6 to cover variant model FCC ID IHDT56AC7 (this model). The major difference between the parent/reference model and the variant model are the difference bands supported on cellular circuits. All other circuitry and features are identical. Based on their similarity, the FCC Part 15C, 15E, 22, 24, 27 reuse the original model's result and do spot-check, following the FCC KDB 484596 D01 v01.

The applicant takes full responsibility that the test data as referenced in this report represent compliance for this FCC ID: IHDT56AC7 .

2.2 Model Difference Information

The main difference between FCC ID: IHDT56AC2/IHDT56AC6 and FCC ID: IHDT56AC7 is as below:

- Remove WCDMA Band IV and LTE Band 4/13/66.
- Add LTE Band 41

Other differences and all the details of similarity and difference can be found in the confidential documents (XT2229-3_Operational Description of Product Equality Declaration).

2.4 Spot Check Verification Data Section

Conducted power test and radiated spurious emission test against the variant model based on the worst-case condition from the original model was performed in this filing to demonstrate the test data from original model remains representative for the variant model

Summary for power and RSE spot check for each rule entry and technology is listed as below:

Test Item	Mode	IHDT56AC2 Parent Worst Result	IHDT56AC7 Variant Check Result	Difference (dB)

	Part 22H-GSM/WCDMA850	-46.91	-51.04	4.13

Conclusion:

Radiated spurious emission test against the variant model based on the worst-case condition from the original model was performed in this filing to demonstrate the test data from original model remains representative for the variant model.

Based on the spot check test result, the test data from the original model is representative for the variant model. The power level and RSE spot check are shown within expected level compliant to limit line.

We are using power and ERP/EIRP measurements from the original parent model reports to list on the grant.

The same DFS detection mechanism/software is used in the variant. Hence, there is no spot check data for DFS mechanism.

We confirm that the test data reuse policy of FCC KDB 484596 D01 Referencing Test Data v01 has been followed and the test data as referenced from the parent model report represents compliance with new FCC ID.
