Location services. Your mobile device can provide location information to applications, using sources including GPS (GPS, AGPS, Galileo, GLONASS and Beidou - depending on the device specification) and Wi-Fi. GPS systems use government-operated satellites that are subject to changes in national policy by the governments operating them that may affect the performance of location services technology on your mobile device. AGPS (Assisted Global Positioning System) uses your wireless service provider's network to improve performance. Airtime, data fees, and/or additional charges may apply in accordance with your service plan.

Phones transmit location-based information when connected to a wireless network or when using other location technologies like GPS. If you use applications that require location-based information such as driving directions, your phone will provide location information to them. These applications may share location information with third parties, including your wireless service provider, applications providers, Motorola, Lenovo, and other third parties providing services.

Emergency calls: When you make an emergency call, the cellular network may activate the AGPS technology in your phone to tell the emergency responders your approximate location. AGPS has

- Always tell the emergency responder your location to the best of your ability; and
- Remain on the call for as long as the emergency responder instructs you.

Please also be sure to take advantage of the privacy and security controls and features within your phone.

In addition, please note that when your Motorola product is turned on for the first time (and is connected to the internet), the international mobile station equipment identity (IMEI) number or serial number (SN) of this product together with the information about the country and city where this product is first activated will be registered with Motorola and/or Lenovo; this will be a one-time registration.
