# SECTION E OCCUPIED BANDWIDTH

*Note: The BTS was configured for maximum power out of 49.54 dBm and minimum power out of 36.5 dBm respectively. The output power was set respectively to 90 Watts 4.5 Watts using a power meter*

The following formula is used to obtain the correct power reference point from which the OBW of the CDMA signal is obtained. See example calculation below:

$$\text{Power (measured in 30 kHz bandwidth)} + 10 \log (1.2288 \text{ MHz} / 30 \text{ kHz})$$

Example:            23.88 dBm + 16.12 dB = 40.0 dBm

The occupied bandwidth is measured in a 30 kHz resolution bandwidth. The summary is listed below.
