RF exposure analysis for the equipment Polar X9 (FCC ID: INWX9; IC: 6248A-X9)

The output power of the device is extremely low (0.71 mW conducted, 1.04 mW eirp) and far below the $60/f(\text{GHz})$ mW ($60/2.45$ mW = 24.48 mW) threshold. For that reason the equipment is categorically excluded from routine environmental evaluation for RF exposure and it is deemed to comply with FCC limits for exposure to electromagnetic fields.

P.A.

A handwritten signature in blue ink, appearing to read "R. Orjick", with a horizontal line extending from the end of the signature.
