

RF exposure analysis for the equipment Polar Z0 (FCC ID: INWZ0; IC: 6248A-Z0)

The output power of the device is extremely low (5.4 mW eirp) and far below the 10 mW SAR exclusion threshold for 2.4 GHz frequency band as detailed in Appendix A of KDB 447498 D01 General RF Exposure Guidance v05r01, 4.3.1 1).

$$\left[\frac{5mW}{5mm} \right] * [\sqrt{2.402GHz}] = 1.5 \leq 3.0$$

For that reason the equipment is categorically excluded from routine environmental evaluation for RF exposure and it is deemed to comply with FCC limits for exposure to electromagnetic fields.
