FORWARD

The following information is submitted for consideration in obtaining a Grant of Certification for low power intentional radiator per CFR Paragraph 15.249 operation in the 2400 - 2483.5 MHz band.

Name of Applicant: Garmin International, Inc.

1200 East 151st Street

Olathe, KS 66062

Model: 011-01326-0x, GPN 011-01326-0x

FCC ID: IPH-01017

Industry Canada ID: 1792A-01017

Frequency Range: 2400-2483.5 MHz.

Operating Power: Less than 1 mW (as design specification,

measured 94.9 dBuV/m @ 3 meters).

Applicable Standards & Test Procedures

a) In accordance with the Federal Communications Code of Federal

Regulations, dated October 1, 2004, Part 2, Subpart J, Paragraphs

2.907, 2.911, 2.913, 2.925, 2.926, 2.1031 through 2.1057,

applicable parts of paragraph 15, Part 15C paragraph 15.249, and

Industry Canada RSS-210, the following information is submitted.

b) Test procedures used are the established Methods of

Measurement of Radio-Noise Emissions as described in the ANSI

63.4-2003 Document, and FCC documents DA00-1407 and DA00-705.

NVLAP Lab Code: 200087-0

2.1033(b) Application for Certification

(1) Manufacturer: GARMIN INTERNATIONAL, INC.

1200 East 151st Street

Olathe, KS 66062

Telephone: (913) 397-8200

NVLAP Lab Code: 200087-0

- (2) FCC Identification: FCC I.D.: IPH-01017
- (3) Copy of the installation and operating manual: Refer to exhibit for Draft Instruction Manual.
- (4) Description of Circuit Functions, Device Operation: The 011-01326-0X is a low power Transmitter.
- (5) Block Diagram with Frequencies: Refer to exhibit for the Block Diagram
- (6) Report of measurements showing compliance with the pertinent FCC technical requires are provided in this report.
- (7) Photographs of equipment are provided in this report and exhibits.
- (8) Peripheral equipment or accessories for the equipment.
 Optional equipment available for the EUT include, AC and DC power adapter, external GPS antenna, GXM 30, GTM 10, and USB cable for computer interface. The available configuration options were investigated for this report with worst-case data presented.
- (9) Transition Provisions of 15.37 are not being requested.
- (10) The equipment is not a scanning receiver.
- (11) The equipment is not a transmitter operating in the 59-64 GHz frequency range.

Equipment and Cable Configuration

Test Setup

The 011-01326-0X is a GPS receiver used for location and navigation and incorporates a low power transmitter operating under the Blue Tooth design specification allowing short-range communications. The GPS receiver is used to display location and navigation. The unit was designed to be mounted in an automotive application and the transmitter section allows for short-range communications to other Blue Tooth devices. The EUT was arranged in typical user equipment configurations for testing purposes. The transmitter offers no interface connection and powered from either an A/C or D/C power adapter. As requested by the manufacturer and required by the CFR, the unit was tested for emissions compliance using the available configurations with the worst-case data presented. Test results in this report relate only to the products described in this report.

Equipment Function and Testing Procedures

The EUT is a low power transmitter operating in the 2400-2483.5 MHz frequency band. The unit allows communications to other Blue Tooth enabled devices.

FCC ID: IPH-01017 IC:1792A-01017 GPN: 011-01326-0x Page 7 of 37

Configuration options for the EUT

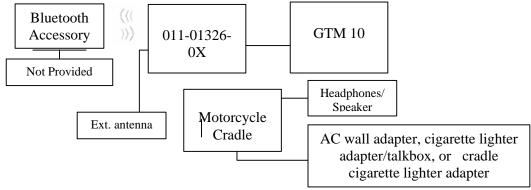

1. 011-01326-0X connected to USB cable (GPN: 325-00128-01) and PC. Powered by AC wall adapter (GPN: 320-00171-12) or cigarette lighter adapter/talkbox (GPN: 011-01241-00). 2.5mm and 3.5mm jacks available for audio input/output. Can be used with external antenna (GPN: 011-00149-05). Can be connected to a Bluetooth wireless accessory e.g. Bluetooth cellular phone (not sold by Garmin).

2. 011-01326-0X connected to GXM30 XM receiver (GPN: 011-01316-00) or GTM 10 TMC FM traffic receiver (GPN: 011-01150-0x). Powered by AC wall adapter (GPN: 320-00171-12) or cigarette lighter adapter/talkbox (GPN: 011-01241-00). 2.5mm and 3.5mm jacks available for audio input/output. Can be used with external antenna (GPN: 011-00149-05). Can be connected to a Bluetooth wireless accessory e.g. Bluetooth cellular phone (not sold by Garmin).

3. 011-01326-0X connected to GTM 10 TMC FM traffic receiver (GPN: 011-01150-0x). Powered by AC wall adapter (GPN: 320-00171-12), cigarette lighter adapter/talkbox (GPN: 011-01241-00), or cradle cigarette lighter adapter (GPN: 320-00171-51). 2.5mm jack available for audio output. Can be used with external antenna (GPN: 011-00149-05). Can be connected to a Bluetooth wireless accessory e.g. Bluetooth cellular phone (not sold by Garmin).

Notes:

- 1. Input voltage of the AC Wall adapter (GPN: 320-00171-12) is 100-240 VAC, 47-63 Hz.
- 2. Output voltage of the AC Wall adapter (GPN: 320-00171-12) is 12VDC.
- Internal clock oscillator frequencies of the 011-01326-0X are 32.768 kHz, 7.37 MHz, 12.0 MHz, 16.367673 MHz, 26 MHz, and 45.158 MHz.

Bluetooth transmits in the 2.45 GHz band (FHSS).

ROGERS LABS, INC. Garmin International, Inc. FCC ID:IPH-01017
4405 West 259th Terrace MODEL: 011-01326-0x IC:1792A-01017
Louisburg, KS 66053 Test #:060208 SN: ENG 1 GPN: 011-01326-0x
Phone/Fax: (913) 837-3214 Test to: FCC Parts 2 and 15.249, RSS 210 Page 8 of 37

The test setup, including the EUT, was arranged in a test equipment configuration and placed on a 1 x 1.5-meter wooden bench, 0.8 meters high located in a screen room. The power lines of the system were isolated from the power source using a standard LISN with a $50-\mu Hy$ choke. EMI was coupled to the spectrum analyzer through a 0.1 µF capacitor internal to the The LISN was positioned on the floor beneath the wooden bench supporting the EUT. The power lines and cables were draped over the back edge of the table.

Radiated Emission Test Procedure

The EUT was placed on a rotating 1×1.5 -meter wooden platform 0.8 meters above the ground plane at a distance of 3 meters from the FSM antenna. EMI energy was maximized by equipment placement, raising and lowering the FSM antenna, changing the antenna polarization, and by rotating the turntable. Each emission was maximized before data was taken using a spectrum analyzer. Refer to photographs in exhibits for EUT placement used during testing.

Units of Measurements

Conducted EMI: Data is in dBuV; dB referenced to one microvolt.

Data is in dBµV/m; dB/m referenced to one Radiated EMI: microvolt per meter.

NVLAP Lab Code: 200087-0

Test Site Locations

Conducted EMI: ROGERS LABS, INC. located at 4405 W. 259th Terrace, Louisburg, KS.

Radiated EMI: The radiated emissions tests were performed at Rogers Labs, Inc. 3 meters Open Area Test Site (OATS) located at 4405 W. 259th Terrace, Louisburg, KS.

Site Approval: Refer to Appendix for FCC Site Approval Letter, Reference 90910, And Dated August 15, 2003, Industry Canada reference IC 3041 dated August 30, 2003.

Subpart C - Intentional Radiators

As per CFR Part 15, Subpart C the following information is submitted for consideration in obtaining a grant of certification for unlicensed intentional radiators.

15.203 Antenna Requirements

The unit is produced with a permanently attached antenna inside the sealed plastic case. No provisions for modification or alterations of the antenna configuration are available to the end For testing purposes, a test unit was modified to allow for antenna-conducted emissions testing for this and other compliance standards. The requirements of 15.203 are met there are no deviations or exceptions to the specification.

15.205 Restricted Bands of Operation

Spurious emissions falling in the restricted frequency bands of operation were measured at the OATS. The EUT utilizes frequency, determining circuitry, which generates harmonics falling in the restricted bands. Emissions were checked at the OATS, using appropriate antennas or pyramidal horns, amplification stages, and a spectrum analyzer. Peak and average amplitudes of frequencies above 1000 MHz were compared to the required limits with worst-case data presented below. No other significant emission was observed which fell into the restricted bands of operation. Computed emission values take into account the measured radiated field strength, receive antenna correction factor, amplifier gain stage, and test system cable losses. Sample Calculations:

Computed Peak (dB μ V/m @ 3m) = FSM (dB μ V) + A.F. (dB) - Gain (dB) = 52.3 + 7.0 - 30 = 29.3

ROGERS LABS, INC. Garmin International, Inc. Summary of Results for Radiated Emissions in Restricted Bands 15.205

The radiated emissions for the EUT meet the requirements for FCC CFR 47 Part 15.205 restricted bands of operation. The EUT had a 12.6 dB minimum margin below the limits. Other emissions were present with amplitudes at least 20 dB below the FCC Limits.

15.207 Conducted emissions limits; general requirements

AC Line Conducted EMI 15.207

The EUT was arranged in a typical equipment configuration (configurations 1 and 2). Testing was performed with the EUT placed on a 1 x 1.5-meter wooden bench 80 cm above the conducting ground plane, floor of a screen room. The bench was positioned 40 cm away from the wall of the screen room. The LISN was positioned on the floor of the screen room 80-cm from the rear of the EUT. for the line-conducted emissions was as follows. The ac adapter for

NVLAP Lab Code: 200087-0

the EUT was connected to the LISN for line-conducted emissions testing. A second LISN was positioned on the floor of the screen room 80-cm from the rear of the supporting equipment of the EUT. All power cords except the EUT were then powered from the second EMI was coupled to the spectrum analyzer through a 0.1 µF LISN. capacitor, internal to the LISN. Power line conducted emissions testing was carried out individually for each current carrying conductor of the EUT. The excess length of lead between the system and the LISN receptacle was folded back and forth to form a bundle not exceeding 40 cm in length. The screen room, conducting ground plane, analyzer, and LISN were bonded together to the protective earth ground. Preliminary testing was performed to identify the frequencies of each of the emissions, which had the highest amplitudes. The cables were repositioned to obtain maximum amplitude of measured EMI level. Once the worst-case configuration was identified, plots were made of the EMI from 0.15 MHz to 30 MHz then the data was recorded with maximum conducted emissions levels. Refer to Figures 1 and 2 for plots of the EUT (320-00171-12) conducted emissions frequency spectrum taken in the screen room. Refer to Figures 3 and 4 for plots of the EUT (320-00171-11) conducted emissions frequency spectrum taken in the screen room. Refer to Figures 5 and 6 for plots of the EUT (320-00171-13) conducted emissions frequency spectrum taken in the screen room. Refer to Figures 7 and 8 for plots of the EUT (320-00171-14) conducted emissions frequency spectrum taken in the screen room.

Summary of Results for AC Line Conducted General Emissions 15.207

The conducted emissions for the EUT meet the requirements for FCC Part 15C Intentional Radiators. The EUT worst-case had an 8.5 dB minimum margin below the FCC/CISPR quasi peak limit, and a 9.3 dB minimum margin below the FCC/CISPR average limit. Other emissions were present with recorded data representing the worst-case amplitudes.

15.209 Radiated emissions limits; general requirements

General Radiated EMI 15.209

The EUT was arranged in a typical equipment configuration and operated through all of its various modes. Preliminary testing was performed in a screen room with the EUT positioned 1 meter from the FSM. Radiated emissions investigations were performed to identify the frequencies, which produced the highest emissions. Plots were made of the radiated emission frequency spectrum from 30 MHz to 22,000 MHz for the preliminary testing. Refer to figures nine

through twelve showing the radiated emission spectrum displayed on the spectrum analyzer taken in a screen room. The highest radiated emission was then re-maximized at the OATS site before final radiated emissions measurements were performed. Final data was taken with the EUT located at the open field test site at a distance of 3 meters between the EUT and the receiving antenna. frequency spectrum from 30 MHz to 25,000 MHz was searched for radiated emissions. Peak and average amplitudes of frequencies above 1000 MHz were compared to the required limits with worst-case data presented below. Measured emission levels were maximized by EUT placement on the table, changing cable location, rotating the turntable through 360 degrees, varying the antenna height between 1 and 4 meters above the ground plane and changing antenna polarization between horizontal and vertical. Antennas used were Broadband Biconical from 30 MHz to 200 MHz, Log Periodic from 200 MHz to 5 GHz, and/or Biconilog from 30 MHz to 1000 MHz, Pyramidal Horns from 5 GHz to 25 GHz, and amplification stages.

Sample Calculations:

RFS Radiated Field Strength $dB\mu V/m @ 3m = dB\mu V + A.F. - Amplifier Gain$ $dB\mu V/m @ 3m = 52.3 + 7.0 - 30$ = 29.3

15.249 Operation in the Band 2,400-2,483.5 MHz

The power output was measured on an open field test site @ 3 meters.

- The EUT was placed on a wooden turntable 0.8 meters above the ground plane and at a distance of 3 meters from the FSM antenna. The peak and average amplitude of the carrier frequency was measured using a spectrum analyzer. The peak and average emission amplitude of the emission was then recorded from the analyzer display.
- (b) Emissions radiated outside of the specified bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in 15.209, whichever is the lesser attenuation. figures thirteen through twenty showing the radiated emission spectrum displayed on the spectrum analyzer of the antennaconducted emissions taken in a screen room. The amplitudes of each spurious emission were measured both at the OATS at a distance of 3 meters from the FSM antenna and antenna conducted. The amplitude of each spurious emission was maximized by varying the FSM antenna height, polarization, and by rotating the turntable. A Biconilog Antenna was used for measuring emissions from 30 to 1000 MHz, a Log Periodic Antenna for 200 to 5000 MHz, and Pyramidal Horn Antennas from 4 GHz to 25 GHz. Emissions were measured in dBµV/m @ 3 meters.

TRANSMITTER EMISSIONS SUMMARY OF RESULTS

Summary of Results for Transmitter Radiated Emissions 15.249

The EUT had a peak amplitude emission of 0.3 dB margin below the average limit of 15.249. The EUT had an average amplitude of harmonic emissions of 16.2 dB margin below the average limit of 15.209 and 15.249. The radiated emissions for the EUT meet the requirements for FCC CFR 47 Part 15.249 Intentional Radiators. There are no measurable emissions in the restricted bands other than those recorded in this report. Other emissions were present with amplitudes at least 20 dB below the FCC Limits.

Frequency Stability

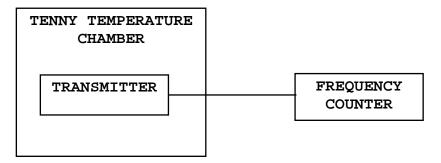

Measurements Required

Temperature stability was measured for the operating temperature range and voltage variations of the unit and recorded.

NVLAP Lab Code: 200087-0

- (1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.
- (2) For hand carried, batteries powered equipment, reduce primary supply voltage to the battery-operating end-point, which shall be specified by the manufacturer.
- (3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided.

Test Arrangement

The measurement procedure outlined below shall be followed:

Step 1: The transmitter shall be installed in an environmental test chamber whose temperature is controllable. Provision shall be made to measure the frequency of the transmitter.

Step 2: With the transmitter inoperative (power switched "OFF"), the temperature of the test chamber shall be adjusted to +25°C. After a temperature stabilization period of one hour at +25°C, the transmitter shall be switched "ON" with standard test voltage applied.

ROGERS LABS, INC. Garmin International, Inc. FCC ID:IPH-01017 4405 West 259th Terrace MODEL: 011-01326-0x IC:1792A-01017 Louisburg, KS 66053 Test #:060208 SN: ENG 1 GPN: 011-01326-0x Phone/Fax: (913) 837-3214 Test to: FCC Parts 2 and 15.249, RSS 210 Page 31 of 37 IPH 01017 Transmitter FCC IC Test Report.Doc 3/28/2006

Step 3: The carrier shall be keyed "ON", and the transmitter shall be operated unmodulated at full radio frequency power output at the duty cycle for which it is rated, for duration of at least 5 minutes. The radio frequency carrier frequency shall be monitored and measurements shall be recorded.

Step 4: The test procedures outlined in Steps 2 and 3, shall be repeated after stabilizing the transmitter at the environmental temperatures specified.

The frequency stability was measured with variations in the power supply voltage from 85 to 115 percent of the nominal value. A Sorenson DC Power Source was used to vary the dc voltage for the power input from 11.7 Vdc to 15.8 Vdc. The frequency was measured and the variation in parts per million was calculated.

Summary of Results for Frequency Stability

The EUT fulfills the requirements for FCC Part 15C Intentional Radiators frequency stability. The EUT had a 0.3-PPM worst-case stability at -20 degrees centigrade.

Statement of Modifications and Deviations

No modifications to the EUT were required for the unit to meet the FCC CFR 47 Parts 15B & 15C, Class B Emissions Standards. There were no deviations to the specifications.

Of

SCOT D. ROGERS, ENGINEER

ROGERS LABS, INC.

Mr. Rogers has approximately 17 years experience in the field of electronics. Six years working in the automated controls industry and 6 years working with the design, development and testing of radio communications and electronic equipment.

POSITIONS HELD:

Systems Engineer: A/C Controls Mfg. Co., Inc.

6 Years

Electrical Engineer: Rogers Consulting Labs, Inc.

5 Years

Electrical Engineer: Rogers Labs, Inc.

Current

EDUCATIONAL BACKGROUND:

- 1) Bachelor of Science Degree in Electrical Engineering from Kansas State University.
- 2) Bachelor of Science Degree in Business Administration Kansas State University.
- 3) Several Specialized Training courses and seminars pertaining to Microprocessors and Software programming.

Re:

Measurement facility located at Louisburg

3 & 10 meter site

Date of Renewal: August 15, 2003

Dear Sir or Madam:

Your request for renewal of the registration of the subject measurement facility has been received. The information submitted has been placed in your file and the registration has been renewed. The name of your organization will remain on the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website www.fcc.gov under E-Filing, OET Equipment Authorization Electronic Filing, Test Firms.

Ms. Phyllis Parrish Information Technician
