June 18, 2012

To whom it may concern:

Regarding the FCC ID label location in the application for FCC ID: IPH-01156, Garmin International wishes to place the FCC ID label on the inside surface of the battery compartment, which makes up almost the entire rear of the unit. The battery compartment is an area requiring frequent and repeated user attention in order to replace the unit battery. Since the unit will not ship with the battery installed, the user will be forced to look at the FCC ID label before initial use of the product during the act of installing the battery. Furthermore, the label will be seen by the user each time the battery in the product is replaced. The battery compartment is easily accessible and the battery is removable without the requirement of any tools in order to do so. The identifier would be visible on the interior surface of the battery compartment as soon the battery door is removed in order to replace the battery.

Sincerely,

John P. Farley
